

The following figures from the Animal House report for the week December 4th-10th, 1932, show how large is the number of animals housed there:-

Dogs.....	69	
Cats.....	57	
Rabbits.....	22	
Guinea Pigs.....	24	
Monkeys.....	63	
Figs.....	2	
Woodchucks.....	9	Total: 246.

Many animals are kept alive after operation for a long time (sometimes for years) and require special care and treatment.

A laboratory has been set up for the use of surgical workers.

The x-ray machine has been used by several of the departments, e.g. Pharmacology, Physiology, Histology, etc.

From these data it is clear that the Animal House plays an important part in the research activity of the University.

B. P. Banni.
