See the Demonstration of the "Vacuum" Oil and Gas Saver

It will be of interest-that's if reduced gasoline consumption and the saving of oil are of concern to

The "Vacuum" oil and gas saver instantly stops all oil leaks, regardless of the condition of engine

And produces the maximum economy in gasoline without the addition of expensive carburetors.

The "Vacuum" oil and gas saver saves oil by maintaining a partial vacuum in the crank case, sufficient to hold the oil and prevent it from leaking out through bad gaskets and around the front bearing. This prevents the destruction of the commutator, commutator loom wires and fan belt.

It also keeps oil to front connecting rod and main bearing. These are always the first bearings to cause trouble and the installation of this device will entirely eliminate this trouble as far as lubrication is concerned.

The "Vacuum" oil and gas saver creates additional vacuum at the needle valve, which makes it possible for the needle valve to be turned at least one-third and frequently three-quarters of a full turn from its original running position. The effect is the breaking up of the mixture into a fine spray. (An example of this is, watering a lawn, screwing down the nozzle, with a result that a fine vapor is created).

Kingston and Holley carburetors, which are standard equipment on all Ford cars, are transformed in this way from "open" type to "vacuum" type carburetors.

And also note that there's also a demonstration of 'Primolite' lens, with new holding feature, which insures lens being held in correct position-now going on in the Auto Accessory Section, Fifth Floor,
