BOOK ON DOG DISEASES And How to Feed

CLAY GLOVER, V. S. 118 West 31st Street, New York.

Forage Plant Tests.

Results of experiments in crop production and field work can never be without interest or without value, and. therefore, a publication describing them must be exceptionally welcome. Such a work is Bulletin No. 84 of the Division of Forage Plants, Dominion Experimental Farms, that gives a summary of results reached at the Central and different branch farms and stations throughout the country, and that can be had free on application to the Publications Branch, Department of Agriculture, Ottawa. There are included also some recommendations as to the varieties to grow, or crop production methods to follow, as deduced from the results of experimental work in the various provinces. A variety of tests at the Central Experimental Farm in Indian corn showed that the best varieties in ears of twelve experimented with were Quebec Yellow, Windus Yellow Dent, Canada Yellow and Free Press, and that, while of the silage varieties proper, Argentine Yellow gave the highest yield in tonnage; White Cap Yellow Dent, Golden Glow, King Philip and Wisconsin No. 7 reached a more advanced stage of maturity. Eighteen varieties of turnips were tested, thirteen of mangels, five of carrots, and four of sugar beets. Of the turnips nine varieties produced over 21 tons dry matter to the acre. Of the mangels half a dozen varieties yielded 31 tons of dry matter to the acre. Of the carrots White Belgium gave 24 tons, 400 pounds of crop with 2 tons, 1,905 pounds dry matter to the acre, and Ontario Champion 25 tons of crop and 2 tons, 1,650 pounds dry matter.

With a view of securing data, bearing on the possibility of producing field root seed profitably in Canada, a great number of seed roots were selected, not only at the Central Farm, but also on most of the branch farms and stations in the eastern provinces. At the Central Farm about 12,000 mangels of the Long Red variety and 3,000 Magnum Bonum Swede turnips were secured for the purpose from the general farm crop. In addition, about 3 tons of mangels of the Long Red and Yellow Intermediate types were selected from the plots grown for variety tests by the Division of Forage Plants.

In leguminous forage plants many tests were made for hardiness, quality and quantity. In order to arrive at a proper understanding of the nature of a number of Canadian grasses and sedges, arrangements were made to secure, through exchange, a representative collection of grasses and sedges from Northern Europe. About a thousand sheets of duplicates were prepared for this purpose and sent forward. The reports from the superintendents of branch farms and stations will be found of the greatest interest, each especially to farmers in the respective provinces rep-

SHORTHORNS AND CHAMPION POLAND CHINAS.

The name of Geo. G. Gould, R. R. No. 4, Essex, Ont., has been before the readers of this paper for many years as a breeder of Shorthorn cattle and Poland China hogs. He has never made much of a boast of his Shorthorn herd, although at the present time they number about thirty-five head, Scotch and Scotch topped. Of the pure Scotch there are Floras, Nonpareils, Village Girls, Jilts, Miss Ramsdens, and Lady Fannys, and the Scotch topped are descendants of the famous cow, Maid of Atha, who won the Shorthorn dairy test at Chicago a few years ago, and, like her, are profitable at the pail. The Scotch bulls in service are: Senior, Bellona Victor, a Bellonabred son of the famous show bull, Imp. Jilt Victor, dam, the Toronto grand champion, Gem of Ballechin 2nd. The junior stock bull is Missie's Sultan, a Missie-bred son of Imp. Royal Bruce, dam by Imp. Joy of Morning, grandam by Village Champion. Sired by these bulls, for sale, is a big selection of heifers and several young bulls. Of the latter, some are old enough for service. For many years the Poland China herd has cleaned up the prize list for the breed at Toronto and London, and this year will be out stronger than ever. Look them up at Toronto and London Shows.

Don't Depend on **Pasture**

But Feed a Supplementary Ration to Your Live Stock

In the Old Country, where the grass keeps so fresh and green all the summer, graziers there almost all feed Linseed Oil Cake to their live stock to supplement the grass.

On the other hand, in Ontario where there is a hot sun and often dry summers the pasture lands soon dry up, the grass is not so succulent, and there is frequently not sufficient to more than sustain the animals.

Milch cows cannot produce nearly their best, and the other live stock can barely hold their own, which means a LOSS all summer.

Many of our best Canadian farmers to-day are adopting this plan of supplementary feeding.

One of the best and most profitable rations for this

LINSEED OIL CAKE

It means a big profit to the farmer, for the reason that his milch cows will give more milk and maintain it longer all summer, also the calves, stockers, etc., will gain weight throughout the entire summer.

Order some Maple Leaf Linseed Oil Cake to-day and feed it to some of your stock and note the difference.
