"TOO MUCH MONEY SPENT TO EDUCATE FOOLS"

Boulder, Colo., Aug. 30.—"The people of the United States spend too much money for the education of their fools, and too little in proportion for the improvement of their gifted sons," declared Charles Henry Keyes, member of the National Council of the National Education Association, in his address to the Summer School students at the University of Colorado. The lecturer said that it is easier to get a \$500,000 appropriation from the average legislature for a "fool" school than it is to get a \$200 appropriation for a university which is training the strong men and women on whom the destiny of the nation depends.

Low Piano Prices Attract Many Buyers

With the lowest prices—with the largest stock and greatest variety—No Piano Buyer can afford to make a selection without visiting this mammoth Removal Sale.

MASON & RISCH, Limited, have a national reputation for quoting at all times the lowest prices on the most reliable makes in the market. There is a feeling of security and reliability attending every transaction made at our house.

The phenomenal success of our Mammoth Removal Sale of new and used Pianos and Player-Pianos is the result of unbounded confidence on the part of the piano-purchasing public, that our prices represent a substantial saving.

We again urge all those contemplating the purchase of a Piano either now or within the next year, to take advantage of these big discounts. Many new pianos in this sale are priced to show a saving of more than \$100. For instance, new pianos that have sold heretofore for \$400 are priced during this sale at \$312. New pianos, not included in this year's catalogue, which regularly sell for \$525, are marked as low as \$448. New Player-Pianos which have heretofore sold for \$700 are marked down to \$585. The one bright feature of the sale is the easy terms on which any instrument may be purchased.

Whole Carloads Selling

Four full carloads of Pianos ordered for our new store in the Mason & Risch Block, are now arriving. These fine new Pianos—the choice of our factories—are all going into the price-slaughter—and at your terms. Don't delay in making your choice. This sale may close any day. We may have to give up our present premises at any moment.

CENTURY OF VAST KRUPP WORKS TO BE CELEBRATED

How Small Forge Grew to be the Greatest Works in Europe

Berlin, September 1.—There are few more fascinating stories in the history of industry than that furnished by the famous German firm of Krupp, renowned throughout the world, alike for its progress and achievement. The firm is about to celebrate the centenary of its existence, and the Kaiser true to his policy of associating himself with every important phase of activity in his country, is to grace the celebrations with his presence. So important an event must perforce arouse interest outside Germany, and hence, for the first time, the famous company fills among the industrial organizations of the world.

It was in 1810 that Friedrich Krupp purchased a small forge in Essen, where he devoted himself to the problem of manufacturing cast steel, but through the article he might assume the market by him in 1815 it commanded but little sale, and the firm was anything but prosperous.

Widow Carried It On. After his death in 1826 the works were carried on by his widow, Alfred, the eldest son, found himself compelled to leave school at the age of 14 in order that he might assume his direction. For thirty years no striking results were achieved, though by 1845 the firm had expanded to 122 workmen were employed.

It was in 1847, according to the Encyclopedia Britannica, that Krupp scored his first real success, when he made a 2500-musket barrel, which was sold at the great London exhibition of 1851 he exhibited a solid flawless ingot of cast steel, weighing two tons, thus establishing the fact that an important firm existed in Germany capable of turning out samples of excellent workmanship. Already guns were being supplied by it to the Prussian army, and soon the firm achieved a world-wide fame. The Essen works were everywhere spoken of and its output watched with the closest interest. The manufacture of wireless steel for railway vehicles was another invention which followed soon after.

A vast enterprise. A process of expansion was embarked upon with the profits of the business, and soon the works began to assume a more imposing shape. With a view to insuring an adequate supply of coal and iron to meet the growing needs of the firm, a policy of acquiring iron and coal mines, in fact, everything was done to strengthen its position and to secure for it the leading place it now occupies in the field of German industry. Alfred Krupp, under whom the firm's successes were achieved, died in 1887, being succeeded by his only son, Friedrich Alfred, who devoted himself to the financial side of the business rather than to its technical side. Under his largest expansion still took place. In 1886 he leased the "Germania" ship-building yard at Kiel, and in 1890 the firm took complete ownership of the firm six years later.

Friedrich Krupp died in 1902, at which time the total number of men employed at Essen and its associated works was 40,000. The enormous increase in the German navy has since been conducive to a still further development of activity on the part of the firm as manufacturers of the steel plates and guns required for the new ships, so that now the Krupp works are among the most gigantic in the world.

The Output Now. About twelve months ago Mr. C. Van Langendijk supplied "The Engineering Magazine" with a series of most interesting illustrations of the works, from which an accurate estimate of the output can be gathered.

Therein it appears that the entire Krupp works comprise six separate groups, employing nearly 80,000 workmen and 6,750 engineers and clerks. The first of the five groups is the Essen Steel Works, with proving grounds at Elppen, Tangier-Hütte, and the second group is the Maschinen-Hütte, with its four blast furnaces; the third group is the Maschinen-Hütte, with its three blast furnaces; the fourth group is the Maschinen-Hütte, with its three blast furnaces; the fifth group is the Maschinen-Hütte, with its three blast furnaces.

Gigantic Steel Works. The Essen Steel Works alone comprise some sixty odd departments, covering an area of about 600 acres, and housing 7,500 machine tools, seventeen roll trains, 437 hammers, eighty-one hydraulic presses, 127 steam hammers, and 569 steam engines, more than 2,000 electric motors, and 900 cranes. The coal consumption of the entire establishment is two and a half million tons a year. The characteristic products of the Essen Steel Works are: armor-plate and ordnance (Bismarck, open-hearth, crucible, and alloy steel), armor-plate and ordnance (Bismarck, open-hearth, crucible, and alloy steel), armor-plate and ordnance (Bismarck, open-hearth, crucible, and alloy steel).

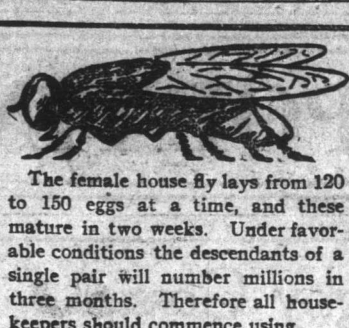

The Gruson Works. Magdeburg-Buckau are made up of more than fifty different shops, covering an area of seventy-five acres and housing 1,100 machine tools and nearly 600 cranes. The German shipyards cover an area of about sixty acres, with eight building slips, of which the two largest can take vessels up to 725 feet long and 120 feet wide. Four of the slips are roofed. The large shops cover nearly two acres; the main bay of the fitting shop is 475 feet by 78 feet, and the boiler shop is 400 feet by 212 feet. Such are some of the details of the firm of small beginnings, now boasting a capital of \$56,000,000. The present head of the firm is the Baroness Krupp von Bohlen und Halbach, who received the right to bear that name on her marriage, in 1896, to Dr. Gustav von Bohlen und Halbach.

LEARNS ENGLISH LANGUAGE IN SIX WEEKS

New York, August 31.—Foon Lish, a Chinese boy, 16 years old, who recently came to his country to live with his father at 22 Pell street, has learned to speak English in six weeks, according to teachers in Vacation School No. 1, at 8 Henry street. When the youth entered the school he could speak only Chinese, but after a few weeks' instruction he was able to carry on an ordinary conversation in English. Foon told a reporter that he came to this country to get college education and that he would enter Columbia University as soon as possible.

PEACE NEGOTIATIONS END

London, Aug. 31.—According to a special despatch received here from Constantinople, the peace negotiations between Italian and Turkish delegations in Switzerland have been broken off.

WILSON'S FLY PADS

early in the season, and thus cut off a large proportion of the summer crop.

BIRD BUILDS NEST WITH A TEN-DOLLAR BILL

Caldwell (N.J.), August 30.—Ordered by his mother to make war on the sparrows that had taken possession of attic windows, John Bowman, thirteen years old, was so successful in his work of destruction that in tearing the half dozen nests apart he discovered in one of them a piece of green paper, which, upon being examined, proved to be a good part of a \$10 bill. In other parts of the nests he found other portions of the greenback. He gathered all he could find and will forward them to the Treasury Department for redemption. When neighbors of Bowman learned of the find, they began the task of destroying nests about their homes, not only of the little sparrows, but every bird that looked like a nest, but Bowman's luck did not follow with others. The boy now expects to take a few days' trip with the proceeds of his find, when he is reimbursed by Uncle Sam. The main part of the bill was in fair, good condition and had been placed by the birds in the bed of the nest.

Three Times Saturday
3, 7.30 and 8.15

NEWCASTLE, DEL. Sept. 1.—The suburb of Dobbinville, near here, is terror-stricken tonight, following the "shoot-up" of the town today by members of the Six Coast Artillery. None of the 700 inhabitants of the town were injured.

Several of the soldiers engaged in the practice at the state rifle range, just south of this city, are said to have been worsted in a dispute with some young men who reside in Dobbinville. Desiring revenge, the soldiers, armed with heavy-bore rifles, started to "shoot up" the town.

Citizens crawled under beds, hid in closets and fled in terror to their cellars when the shooting began. For more than 30 minutes a fusillade was kept up. Bullets crashed through windows, glanced from the sides of dwellings and sung by the heads of terror-stricken residents. From 50 to 100 shots were fired. Twenty men are said to have taken part in the firing.

The main point of attack seemed to be a house on Clark street, occupied by Mr. and Mrs. William Mohr and their four children, ranging in ages from 12 to 16 years, and Mr. and Mrs. John Corbett and son, 6 years old. Nearly every window was shot from this house, and so hot was the fusillade that bricks were shot from their fastenings on the window ledges.

Mohr appeared at the window and implored the soldiers to withdraw, but a shot aimed directly at him caused him to retire in haste. Other citizens who mustered up courage to shout from their windows got a similar reception. Mayor Roney has taken up the case, fair with the commandant at Ft. DuPont.

OPTICAL
My record of over 1,000 school children in Boston and vicinity fitted to glasses would be sufficient guarantee of my worth in this line of work. No child should enter school without a careful test for eye troubles. Consultation free. See me at Harwood's Jewelry Store, 124-A Eighth Avenue West.

COUNCIL TO WRESTLE WITH BOXING BYLAW

Measure Probably Will Come Up at Regular Meeting Tonight

Despite Gayeties of Stampede Week, Pressing Affairs Make Session a Necessity

Despite the gayeties of Stampede week, press of business will make a regular meeting of the city council unavoidable this evening. The question of the proposed boxing bylaw probably will be brought up again and disposed of. Since the attempted session of the council last Monday night, which failed for lack of a quorum, several of the councilmen have been subjected to strong pressure by opponents of the proposed bylaw. As a result, there is every indication that opposition to the measure, even with all its stringent restrictions, will be too strong for its friends.

The Calgary General Hospital also is asking that the council make arrangements to afford the institution more temporary quarters to care for convalescent typhoid patients. In addition to these measures, there is a demand for the dismissal of several of the city's employees.

DUCAL PARTY ARRIVES AT SASKATOON

Governor-General Says Saskatoon is First Real Western City He Has Visited

Saskatoon, Sept. 2.—In festive array, gay with flags and bunting and other decorations, with thousands of citizens and people from the surrounding country crowding the streets and with a day of perfect weather, Saskatoon today was the scene of the Ducal party, which arrived at ten o'clock this morning. There was a great demonstration of welcome as well as that of the city's citizens. With a mounted escort and a guard of honor, their royal highnesses proceeded to the city park where the address of welcome was read by Mayor Klingsberg. In reply, the duke said: "Your worship and gentlemen: I beg you to accept my very best thanks for the royal highnesses alighted. They had sat down to a banquet of welcome and for your expressions of loyal devotion to the throne."

"Saskatoon is the first city of the true west that I have visited in my official capacity as governor-general, and here, I know, that I see the real type of the western city, where the energy and self-confidence of the early citizens has been justified and rewarded by success and where they have had satisfaction of seeing a busy thriving town standing on the ground where they pitched their tents but a few short years ago. It is a most interesting thing to me to be called on by his majesty the king to preside over the destinies of this great dominion at a time when such progress and prosperity are evident from coast to coast. And I pray that this prosperity which now greets the eye at every point along the long road which I travel may always be in store for Canada in the future."

The royal party left at noon for Prince Albert.

ROMAN SOCIETY LEADERS MAY BE COUNTERFEITERS

Are Charged With Trafficking in Counterfeit Government Stock Certificates

Rome, Aug. 31.—A profound sensation was caused by the arrest today of a group of Roman society leaders, charged with five accomplices on a charge of trafficking in counterfeit government stock certificates. The chief accused are Count Falzacappa and Count Harbellini, who are accused of having issued ill-secured certificates on an extensive scale. The organization which they are said to be heading is said to be doing business on a large scale. They were incarcerated in jail despite their protests of innocence.

SOLDIERS SHOOT UP DELAWARE TOWN TO GET REVENGE

Newcastle, Del. Sept. 1.—The suburb of Dobbinville, near here, is terror-stricken tonight, following the "shoot-up" of the town today by members of the Six Coast Artillery. None of the 700 inhabitants of the town were injured.

Several of the soldiers engaged in the practice at the state rifle range, just south of this city, are said to have been worsted in a dispute with some young men who reside in Dobbinville. Desiring revenge, the soldiers, armed with heavy-bore rifles, started to "shoot up" the town.

Citizens crawled under beds, hid in closets and fled in terror to their cellars when the shooting began. For more than 30 minutes a fusillade was kept up. Bullets crashed through windows, glanced from the sides of dwellings and sung by the heads of terror-stricken residents. From 50 to 100 shots were fired. Twenty men are said to have taken part in the firing.

The main point of attack seemed to be a house on Clark street, occupied by Mr. and Mrs. William Mohr and their four children, ranging in ages from 12 to 16 years, and Mr. and Mrs. John Corbett and son, 6 years old. Nearly every window was shot from this house, and so hot was the fusillade that bricks were shot from their fastenings on the window ledges.

Mohr appeared at the window and implored the soldiers to withdraw, but a shot aimed directly at him caused him to retire in haste. Other citizens who mustered up courage to shout from their windows got a similar reception. Mayor Roney has taken up the case, fair with the commandant at Ft. DuPont.

RECORD FEAT IN THE ALPS TO CREDIT OF ENGLISHMAN

With Two Swiss Guides He Descends the Almost Perpendicular Brenva Face of Mont Blanc

London, Sept. 1.—The first descent of the Brenva face of Mont Blanc has been made by R. N. Lloyd, of Athlone, Lord & Co. Burrell St., London, E.C. He was accompanied by two guides, Josef Pollinger and Franz Imboden, the latter of whom was injured by falling ice.

July last year Mr. Lloyd ascended the mountain by the Brenva glacier. His description of the descent last month illustrates at once the perils and delights of mountaineering. "On the morning of July 11," Mr. Lloyd writes, "we left the Grand Muets at one o'clock and arrived at the summit of Mont Blanc at 7.10 in beautiful weather. It was quite warm and pleasant at the time. We rested there a quarter of an hour, and then proceeded down to the Brenva. After some trouble with the Seracs we got just above it, and by hitching our 300 feet rope around a Serac got on to the arête. We intended to descend by the steep band of snow on the far side of the arête, but the snow was so soft and the ice so hard that we were unable to advance. A short distance we again hitched our rope on a small projecting piece of rock and in a short time reached the edge of the ice couloir."

"Franz Imboden, a guide, cut the steps in the ice across the couloir, and then made himself secure on the far side of the band of snow. I started to join him, when, to our horror, the ice fell from the rock to the night of the couloir from a great height, striking him several times. Fortunately for us, all the largest pieces, about the size of a croquet ball, struck the middle of his back, which he obviously did not feel. Smaller pieces struck Imboden on the side, and he seemed to crumple up in a fainting condition, and slipped forward. Josef and I held on to his rope and steadied him, and being in good snow we thus enabled him to hang on to his axe and recover his balance."

"I hurried over to Imboden, just escaping a further fall, and in a minute or two was joined by Josef. Both of us fortunately escaped a great deal of harm. Imboden was a few yards from the most dangerous place and gave him the hand. He was obviously a great deal hurt and shaken. We dared not delay, on account of the sun on the very steep snow, so I shouldered his sack, and we proceeded to the lower part of the couloir, where Imboden cut and was much less steep, Josef leading."

"Here we crossed again, recovering our spare rope, which had slipped from us at the time of the accident. Passing to the left, under the band of ice, we proceeded toward the lower part of the arête. We then found that the ice had forced us a little too low, so we had to go up a little. "It was still too steep to stop, so we went on to our breakfast place of last year at the end of the celebrated narrow arête, where we were able to rest and attend to Imboden, who was complaining of feeling very ill. After he had had a jelly and some more brandy and wine he felt much better. The result of discussion, Josef and I decided to go down the steep snow on the side of the arête, and we came up last year although this year it was much steeper and more difficult."

"Perils Descend. "It was like going down an almost perpendicular ladder without the advantage of the rungs. What with the exertion, the heat, and the sack, I found it rather hard work. Imboden, before we were down, showed signs of exhaustion. "About two-thirds of the way down there was a band of almost perpendicular ice, with an exceedingly thin covering of snow. To cut down this would have taken a 'big' time, and Imboden was getting weak. Josef, therefore, drew in a long-barbed piton, which had been made by my blacksmith at the works. To this he fixed our 200 foot spare rope, which was just long enough to take us over the difficulty."

"We went to the extreme right, but found that we could not get over the bergschrund, so we had to work back again and down some more very steep snow. We managed to find an easy place over, and hurrying as fast as we were able over this debris, stood safely at one o'clock on the glacier, having taken two hours to get off the arête. We congratulated each other on having got down safely and on having made the first descent of the Brenva."

"After a short rest, Josef having kindly lightened my sack, we started up the steep snow to cross the couloir, continually sliding to our waists in the soft snow. In an hour we stood on the arête; then we descended the steep snow to the edge of the low Seracs, and at 7.15 arrived, tired out, at Courmayeur."

"The climb is a magnificent one, and the finest that either Josef or I were ever on. But for the accident to Imboden, it would have been a perfect day."

Wonder What This Means? The falling out of Senator Penrose and Boss Plunk bids fair to furnish new proof of the truth of an old adage. —St. Louis Republic.

Tan Shoes For Fall Wear

With autumn upon us, Milady's thoughts naturally turn towards her fall habit. One important question that arises is: what will be correct for street wear?

Nothing seems to take the place of tan shoes for street wear, in the fall. They have a smart appearance all their own that places them in high favor with the ladies.

We point with pride to our tans in New Dorothy Dodd Styles

There is something decidedly distinctive about these shoes. The toes are either high or narrow semi-receding; the vamps short; and the insteps are gracefully arched back to the well formed heels. They come in high and medium height tops both in buttoned and laced styles.

These products of the Dorothy Dodd shoe factory are made by the Wonder Worker Shape Retaining Process—they hold their shape until worn out.

The name Dorothy Dodd is alone a guarantee of quality and fit.

Come into the store and try a pair of these shoes on. You will find them the daintiest models of the season.

MAN AGED EIGHTY YEARS WORKS IN FIELD

New Haven, Mo., Aug. 30.—Henry Jenkins has been working hard in the harvest field here for the last two weeks. He pitches wheat on the hottest days, even if he is more than 80 years old.

He does not know his exact age, but

can prove that he has twenty-two children, the youngest 22 years old, and more than forty-five grandchildren. He has three great-grandchildren.

Jenkins does not chew or smoke, but plays ball, wrestles and pitches horseshoes. He seldom eats more than two meals a day.

"A man ought to work all the time he can, so people will respect and call him industrious," he says. But when he gets too old to work it ain't wrong to steal chickens."
