8 and 9 Commonwealth Block, Winnipeg, Man.

## EDITORIAL

### *The Subject of Reciprocity*

We cannot let the subject of Reciprocity drop, feeling that it is the most important question before the medical profession in Western Canada at the present moment. Much more than appears at first glance is involved. The letter from a student which appears in our correspondence column shows that the coming medical man is following the discussion with lively interest. We are glad of this because it proves that if we do not gain this point our successors assuredly will. One has only to hear the opinions of the students on the subject. What is the bar? *Provincialism* always. For an individual to be dubbed "provincial" is a slur. Then surely for a profession doubly so. The greater the education and culture, the greater should be the open mindedness and straightforwardness.
