400 Steels a Day with the Leyner Sharpener

With one operator the Leyner Sharpener can easily turn out 250 steels per day, with two men this output is increased up to at least 400 per day.

Compare this with the speed of hand work.

The Leyner Sharpener requires no special foundation, it has only one control lever, the work is in plain sight all the time, the enclosed die gives perfect gauging every time.

If you are interested in actual figures of savings from using the Leyner Sharpener we shall be glad to give you them.
