THE golden grain, of Western Canada, much of which will go to the Allies, is now being gathered in. Reports from the West are extremely favorable, and it is estimated that the yield will be large. The Canadian Pacific Railway has made every provision for the transportation of the great harvest along its lines. Troubles of a few years back have all been overcome — to the satisfaction of the grain grower. The Canadian Pacific has opened up huge tracts of land for the settler and made it easy for him, not only to purchase the land, but stock and cultivate it. The introduction of irrigation into Alberta was the means of making it possible to till the soil that was previously considered waste. Many millions of dollars have already been spent by the C. P. R. on irrigation canals and dams, the greatest of which is the Basano Dam at the Bow River, one of the most wonderful pieces of

engineering work that has ever been accomplished. The important feature in connection with the wheat lands of the prairie provinces is that they rank as "hard" wheat producing — the kind of wheat the millers like. The demand for wheat is steadily increasing, while the area of hard wheat in the United States is just as steadily diminishing. The hard wheat farmer of Minnesota and the Dakotas is, therefore, coming up to Western Canada, where he finds the peculiar advantages of soil and climate, which are necessary to this profitable crop. Canada West stands foremost in the world as the wheat producing country, but happily, the farmers are beginning to realize the value of the "mixed farm," and not only are they producing the bread of the country, but also the meat, butter, and eggs. Furthermore the market gardener is also to the fore, and he is finding considerable recompense.
