The Rattler Does Not Warn

This is one reason for the continued exstence of the rattlesnake in the midst of nemies who would exterminate it, for enemies who would exterminate it, for, contrary to the general belief, the rattler rarely gives its characteristic note of warning until actually attacked. In fact, the sharp, vibrant ring of its terminal appendage is probably designed more to assist this very defiance or warning. In the first place, serpents possess but the most rudimentary traces of auditory apparatus and are practically deaf, the most rudimentary traces of auditory apparatus and are practically deaf, the deficiency in the sense of hearing being compensated for by an extreme sensitiveness of feeling which makes them aware of the approach of moving objects by the vibration of the ground.
