FROM REMOTEST PARTS OF GLOBE

Tanlac Elements Come From Many Lands Far Away From Here

The ingredients from which the celebrated medicine Tanlac is made, come from remote sections of the earth, and are transported thousands of miles over land and sea to the great Tanlac Laboratories at Dayton, Ohio, and Walkerville, Canada.

The Alps, Appenines, Pyrenees, Russian-Asia, Brazil West Indies, Rocky Mountains, Asia Minor, Persia, India, Mexico, Columbia and Peru are among the far away points from which the principal properties of this remarkable preparation are obtained.

What is said to be the largest pharmaceutical laboratory in the United States has been completed at Dayton, Ohio, for the manufacture of Tanlac which, according to recent reports, is now having the largest sale of any medicine of its kind in the world; over 20,000,000 bottles having been sold in six years.

The new plant occupies 60,000 square feet of floor space and has a daily capacity of 50,000 bottles. Uniform quality is guaranteed by a series of careful inspections by expert chemists from the time the roots, herbs, bark and flowers are received to their rough state from all parts of the globe until their medicinal properties have been extracted by the most approved processes. The finished medicine is then bottled, labeled and shipped out to tens of thousands of druggists throughout the United States and Canada to supply a demand never before equalled by this, or any other medicine.

Experimental Work In Agriculture

Suggestions have been made in parliament that the splendid work being performed by the Experimental Farm system of the Dominion is not as widely understood and appreciated as it should be. Personal of the report for the year ending March 31, 1921, prepared by the Director, Mr. E. S. Archibald, will reveal far reaching results and a remarkably wide range of activities.

In this report details and particulars are given of the operations carried on by all the divisions, branches, sub-stations, and illustration stations scattered from one end of the Dominion to the other. In fact from this report can be formed an excellent idea of the prospects and probabilities in agriculture of practically every district in Canada. Nor is it only in this direction that the valuable results that are being established are being revealed. Since the war, expansion has been possible in nearly every branch, the number of illustration Stations has been increased, and progress owing to increased facilities, has been most marked. At the Central Farm at Ottawa, a much-needed modern dairy building has been added, herds of cattle have been strengthened, and extended work in poultry improvement and disease investigation has been entered upon.

In short, release from emergency work necessitated by the war has made possible new and renewed effort in every line of agriculture of national and domestic importance. An especially interesting feature of the report is the attention given to weather conditions. By these it would appear that Canada revels in sunshine. At Ottawa, for instance, in the year under mention, there were 2,005 hours of sunshine, at Fort Vermillion in the Peace River District, Alta., there were 1,930 hours, at Charlottetown, P. E. I., 1,658, at Napan, N. S., 1,654, at Fredericton, N. B., 1,733, at Lennoxville, Que., 1,715, at Kapuskasing, Ont., 1,670, at Brandon, Man., 2,000, at Indian Head, Sask., 1,924, at Rothern, Sask., 2,355, at Lethbridge, 2,333, and at Vancouver, B. C., 2,106.

There is no convenient place to have a cold.

AFRAID OF HIS OWN MOTION

Not long ago Hon. W. E. Knowles resigned as a member of the Martin Government to run as a Liberal candidate for the Dominion Parliament. About the same time J. A. Maharg resigned his seat in the Dominion Parliament as Member for Maple Creek, in order to enter the Martin Government. No doubt both Mr. Knowles and Mr. Maharg will turn up later on as candidates for the House of Commons in opposition to the Meighen Government.

This may argue a friendly understanding between Mr. Knowles of the Liberal party and Mr. Maharg of the Farmer's Party. If, however, they see eye to eye on the tariff question, the tariff question, the western farmers cannot look to them for much tariff reduction. During his service in Parliament Mr. Maharg has never moved to reduce the duty upon a single agricultural implement. Mr. Knowles did make such a motion when he was in Parliament and then ran away from it. In 1909 he moved a resolution in favor of reducing the duty upon agricultural implements but never pressed it to debate, much less to a vote. Whenever there was any danger of the motion being reached he absented himself from the chamber.

Knowles got to be shown on Parliament Hill as "Man afraid of his motion," being a sort of second cousin to the Indian who was called "Man afraid of his horse."

ENCOURAGING CANADIAN FORESTRY

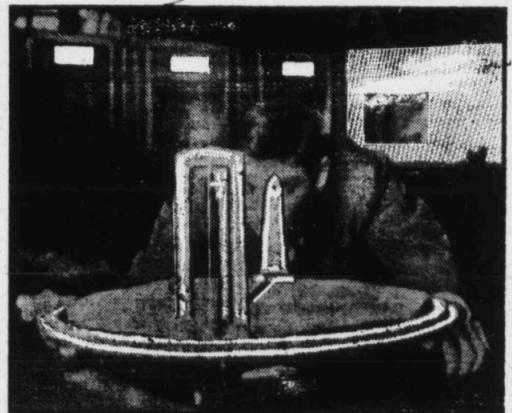

Scene of a Forest Fire.

It was only during recent years that the public of Canada began to fully realize the value of the trees of the country, and the necessity for protecting them. One never knows the worth of a tree until its shade is gone. Canada was so rich in forests that the people imagined that their forests were inexhaustible. But year after year devastating fires swept over the wooded areas to such an alarming extent that the people at last realized that steps would have to be taken to save the trees. Twenty years ago the Canadian Forestry Association was inaugurated. To-day under the presidency of Mr. C. E. E. Usher, passenger traffic manager of the Canadian Pacific Railway, it is one of the most flourishing organizations in the Dominion.

The produce of the forests is one of the greatest assets of Canada. The pulp and paper business and the lumber business supply tens of thousands with profitable employment. The object of the Canadian Forestry Association is to preserve existing forests, to encourage tree planting, and provide the most up to date forestry administration.

The Association has now 12,500 members, the majority of whom are not financially interested in timber limits, saw mills or paper mills. It is completely independent of government departments and commercial bodies and has the more easily, on that account, won public confidence and attained great influence through its aggressive educational campaign. From the beginning the association has aimed to encourage a spirit of intelligent partnership between the federal and provincial governments and the wood-using industries in connection with the protection and management of the forests.

The new Forest Fire Finder, an instrument recently invented to locate a fire quickly. It is expected to reduce the danger and loss from fires to a minimum. The instrument has been installed in the look-out towers in California forests and a fire can be detected 50 miles away.

lectures sets of lantern slides, and lecture manuscripts; an illustrated forestry magazine; the placing of "sermonettes" on the menu cards in railway dining-cars, and little warnings in cigarette packages, etc. Tree planting in the Prairie Provinces is making rapid headway at present. On April 10th, 1921, a tree planting campaign was started. There are now more than 50,000 plantations of trees in the three prairie provinces, and more than 60,000,000 seedlings have been furnished from the Dominion Government nursery at Indian Head, to prairie farmers. Fully 90 per cent. of them have been successfully grown. A railway car equipped as an auditorium with motion picture machines visits many districts, and lecturers explain the object of the tree planting campaign. It is expected that 200 prairie communities will be covered before the present tour closes. The primary object is to enlist the personal interest of settlers in constructing a shelter built of trees by showing them exactly how to proceed and supplying complete data to ensure success. "The economic importance of constructing windbreaks of trees," said Mr. Robson Black, executive secretary of the Canadian Forestry Association "cannot be overstated. Thick shelter belts are a powerful preventive of soil drift, and of wind damage to crops. A thick growth of trees protects the land to a distance equal to ten times the height of the trees. There is also to be considered the need of every farmer for fence posts and fuel and small construction timber. He may very easily and cheaply produce such necessities on his own property. "Our tree planting campaigns are heartily endorsed by agriculturists and foresters for they are thoroughly practical. They have the financial backing of one of the prairie provinces, Saskatchewan, and of the railways, land companies, and several wholesale houses in Winnipeg."
