resting on the right arm of the chair and from which blood was dropping. Instantly been over 100 years of age, was laid away to the order was given to again turn on the current. The dynamo was almost at a stand still and although the engineer quickly responded to the command it was quick enough to anticipate the signs of what may or may

not have been reviving consciousness. As the group of horror stricken witnesses stood helplessly by, all eyes fixed on the chair, Kemmler's lips began to drip saliva and in a moment more his chest moved and from his mouth came a heavy stertorous sound,

quickening and increasing with every resiration. The wheezing sound was like a half groan which forced itself past the tightly losed lips and sounded through the still hamber with a ghastly distinctness. Some of the witnesses had to turn away from the

sight, and one of them lay down faint and In 73 seconds after the order had been given for the second current the response

came and the sound that had horrified the isteners about the chair was cut off sharply. as the body once more became rigid. The gelist on the evening of the same day. On dynamo was run up to its highest speed the following day his lordship will conseand again and again the full current of 2,000 volts was sent through the body in the chair. As the anxious group stood silently by it was seen that the body was burning and a pungent, sickening odor permeated the atmosphere. The current was again shut off and there was a relaxation of the body. Kemmler was dead.

### WHAT THE DOCTORS HAVE TO SAV. Dr. Spitzka says the scientific uncertainty

of the new execution law leads him to be lieve that this method will not be adopted in other states, and that this will be the first and last electrical execution. Dr. Shrady said: "The execution was brutal. It was worse than hanging although probably not so painful, but the failure to kill at the first application was barbarous.

109 Expert Huntley said : "No one can depict n words the apparent horrible sufferings of the man in the interval between the first and second applications of the electric cur-162 rent.' 57

An examination of Kemmler's brain showed that it was hardened 128 directly under the spot where the electric current came in contact with the 980

skull. The blood at that spot was hardened,
