A prominent breeder of Holsteins claims Alpine, 2nd. that the introduction of ensilege in his feeding has entirely prevented losses from milk fever among his cows, though previous to its use in feeding, he usually lost one or more valuable animals every year.

MURRAY & LYMAN'S FLORIDA WATER IS one of the surest and speediest of cures for every form of nervousness. It relieves head-ache when other applications completely fail. It reinvigorates the fatigued and overtaxed body, and it imparts force and buoyancy to the mental powers.

Fall ploughing is a good means of destroy- 2nd. the fall, as the fine particles of light soil may be blown away if ploughed in the fall. These fine particles are the most valuable portion.

Among the William Provided Household in the fall. These fine particles are the most valuable portion.

Among the fall would be ploughed in the fall. These fine particles are the most valuable portion. AMONG THE WARMEST ABVOCATES OF the use of Northrop & Lyman's Vegetable Discovery and Dyspepsia Cure are ladies formerly in delicate health, whose vigor and bodily regularity have been restored by it. Cases of debility of long standing, chronic billiousness, weakness of the back and kid-

ney, feminine ailments, and obstinate types of nervous indigestion, are overcome by it. Oats are not a good crop to precede wheat and, to avoid the chances of loss of seed, some farmers, after ploughing their out ground, let it lie until spring and sow spring grain. It is severe on the land, but strong heavy soil will bear a good deal of cropping where it is fall ploughed. With liberal use of fertilizers, oats can be grown in succession

indefinitely and bring good returns. COUGHS AND COLDS that we so frequently neglect and which so often prove the seeds sown for a harvest of Consumption, should have immediate and thorough treatment. A teaspoonful of PHOSPHORIZED Emulsion

carefully examine the ear and stalk, and their manner of attachment. Note size of B. Titus, 3rd. ear and grain, if well fitted out at the end.

Poultry Fences.

Everybody knows how to make a harmful. fence for the poultry yard, but every-body does not know how to make a cheap fence. Fences are very expen- now grown in the United States. son to make a fence in such a manner side of New England and the Middle unless it is well made it is worthless, does well in the hilly regions, where fence as strong as possible, and the weakest place is near the bottom.

Weakest place is near the bottom.

The desire should be to have the short, flourishes at higher altitudes, with a lower temperature, and under a greater rainfall than other grains. The objection to a lath fence is that dogs some times break through, not its availability as a second crop, thus Bull 2 year-old—J. Robertson 1st, B. Adams 2nd.

Bull 1-year-old—W. S. Smith 2nd.

Bull 1-year-old—W. S. Smith 2nd.

Bull 1-year-old—W. S. Smith 2nd.

Yoke Work Ox-J. McNicol 1st, J. lath fence, six feet high, the panels and sowed with buckwheat, which by may be eight feet. Having placed growing rapidly smothers the weeds.

Another use is that of a green manure. Single Work Ox—J. Milne 1st, J. the posts eight feet apart, procure arquhar 2nd.

Steer 2 years old—W. Paterson 1st, ling laths,) and securely nail the bottom strip from post to post, and six inches above the ground Nail the y. Low 2nd.

Another use is that of a green manure. It grows well on moderately poor land, and makes a large growth of straw, which rots quickly when plowed under, thus adding much vegetable matter to the soil.—American next strip exactly eighteen inches Agriculturist. above the first one. Thus the first strip will be six inches above the Bull 2 years old-J. Aitkin 1st, D. is four feet long, a half lath will be people. two feet in length. Let the bottom

Two Ewes 1 year old—S. Brown feet high, but close and strong, you for use during winter, when the now desire height. This is made of ground is frozen too deeply to get at the whole lath, which is nailed to the them.

Ewe Lamb-P. Ledingham 1st, middle and top strips, but instead of being only one inch apart, two inches Ram-P. Ledingham 1st, J. McLel- will be close enough. The fence will thus be six feet high, and durable. The practice of nailing a whole lath with a balf lath above it, is here reversed, as we place the half lath at the top. There are several advantages to be gained by so doing. First the strips are brought close to each Pig under 1 year—W. Malory 1st, other, making the pressure against two strips instead of one. The half lath can be placed closer together, Cock and 2 Hens—P. Ledingham the whole lath. Should it be desired, the whole lath may be three inches apart, as full security of confinement is made by the lower. It is cheaper to repair a rotten half lath than a whole one, and as such fences usually begin to give out at the lower part first, this is a great advantage. Such a fence combines strength, cheapness,

Two Clever Collies.

If your should visit Central Park, New York, some fine morning, you might see young Shep, the eighteen year-old veteran, at his lessons. He s never whipped, not even when he does wrong or makes mistakes, because that breaks the the spirit of a collie, as, indeed, of any other kind of dog, and a shepherd dog must of all things be brave. When he doen't carry out an order correctly, or in such a way that the sheep can't understand him, old Shep is sent with the same Russian Oats-W. McKenzie 1st, order and Shep Junier is made to keep still and watch him until it is executed. His first lesson is simply to guard a hat or a coat or a stick thrown up-Far- on the grass by the shepherd, and he is left out with it sometimes until late in the evening, to show him the importance of fidelity, the very first essential in a shepherd dog. Next he is taught to gather the sheep, to take them to the right, then to the left. After this he is sent on the trail of a lost sheep, with instructions to bring it back slowly. The most important lesson, and one young Shep has not vet learned, is that of going among the flock and finding out if any of them are missing. This, as may be imagined, is by no means an easy task with a flock of 92 ewes and 69 lambs. But old Shep can do it, for he knows every member of the flock, though to Potatoes, varieties—D. Innes 1st, the ordinary observer they all look A. Davidson 2nd, D. Low 3rd.

Potatoes, Early Rose—A. Peterson

Shep can, if his master, the shepberd, is not mistaken, perform a feat more Potatoes, any other variety-D wonderful than this. The shepherd er some of the flock have not strayed Swedish Turnips-D Low 1st, W. up the bridle-path on their way home, while he was busy in keeping trouble-Yellow Turnips--J. Findlay 1st, some boys away, will take his stand W. Paterson 2nd. at the gate of the fold and touch each Turnips, any other variety—Mrs. sheep with his forepaw as it passes in. Stewart 1st, W. Paterson 2nd.

At such times he has the air of a far-Carrots, Early Horn-H. Duthie, mer counting his cattle as they come home at night, and he wears an ex-Carrots, Late-T. Cummings 1st, pression as if his mind were occupied with an intricate sum in addition. Whether he is really counting the wheep or not cannot be said posi-Pumpkins-W, H. Squires 1st, J. tively; but he has been known after Homes 2nd. noting each sheep as it passed, to Onions from Seed—J. Stephenson rush off up the bridle-path and return with a straggler. Cabbages: D. Low 1st, W. Low much to prove that the shepberd's assertion that old Shep can count the

truth.

Buckwheat as a Farm Crop. The albuminoids are less in buckwheat than in wheat; in fact, not much more than half an abundant while there is a greater amount of starch and fat. Buckwheat is, therefore shown by analysis to be more fattening and less strengthening than wheat. It makes an excellent feed for pigs and poultry. Many persons believe that buckwheat is not healthful, and causes skin eruptions. Several other members of the buchwheat family produce powerful vegetable principals, and this plant may possess

one such, though it is probably not

weed exterminator. The infested To make a good strong, durable land may be tilled until mid-summer

The Annual Exibibition of the New ground, and the second strip being eighteen inches above that, will consequently be two feet from the ground.
