

Tarvia

*Preserves Roads
Prevents Dust*

Lancaster St., Berlin, Ont. Constructed with Tarvia X Modern Pavement

Meets Modern Road Requirements

TARVIA is a powerful binder for the surfaces and foundations of macadam roads. It fills the voids and locks the stone in a tough, durable, plastic matrix.

A Tarviated surface is dustless and clean. It sheds water readily and is dry immediately after the rain, so that pedestrians are not inconvenienced. The surface never gets muddy or dusty.

On account of the Tarvia matrix, these roads will bear heavier automobile traffic than in a macadam because the surface yields instead of pulverizing under the strains. The Tarvia matrix prevents internal movement and grinding.

The plasticity of the Tarvia also makes these roads very quiet. Horses' hoofs make almost no sound on a Tarviated road. Tarvia is waterproof, and Tarviated roads, therefore, are protected against damage from torrents on grades.

Tarvia has no odor except when being applied. After it hardens, it has no injurious effect on shoes, clothing or vehicles. The cost of using Tarvia is not a factor for consideration, because it has been repeatedly demonstrated that it is cheaper to maintain a dustless road with Tarvia than a dusty one without it. Maintenance economies more than balance the additional cost.
