

tional interest, especially so of the construction and functions of the human body. Any work taking up a subject in as thorough and able a manner as Drs. Gouid and Pyle have done in this instance will certainly meet with the heartiest support from the profession, as there must be an exceedingly small percentage of men who style themselves physicians who will not take as keen interest in studying the abnormalities of the human structure as they will in the treatment of disease. The book commences in chapter I. by taking up genetic anomalies, obstetric anomalies, followed by a most interesting chapter on anomalies of stature, size and development. The author then takes up in several chapters surgical anomalies; after which anomalous skin, nervous and mental diseases are discussed. The book is well illustrated, and will be found of peculiar interest to the practitioner.

*The Physician's All-Requisite Time and Labor-Saving Account Book.* Designed by WILLIAM A. SEIBERT, M.D., of Easton, Pa. Philadelphia and London: The F. A. Davis Co., Publishers. 1893. Toronto: A. P. Watts & Co., College Street.

There have been placed upon the market in past years quite a number of physicians' account books, some possessing a certain amount of merit. The great fault with the majority, however, has been that practitioners could not depend upon them as being acceptable in a court of law as proof of an account. Dr. Seibert's "All-Requisite Time and Labor-Saving Account Book" has this great advantage in that it has been tested in this respect, *and not found wanting*. This when known will be more than sufficient to sell the book, as too many good accounts have been lost in the past by doctors owing to this very fault. It is sufficient to say for this book that the entire account appears on one page, so that it only requires a glance to see just how Mr. or Mrs. or Miss So-and-So stand financially with their attendant physician. The book is on very good paper, and is so bound that no amount of wear can damage it.
