

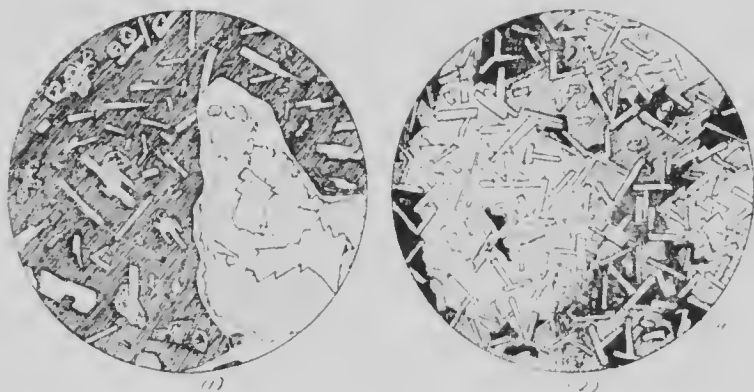

FIG. 6.

Amygdaloid 17. Amygdale with chlorite (chlorite at top left). Matrix of iron-stained unindividualized matter with porphyritic plagioclase, and alteration products of augite (2) and olivine. Vesicular part of a rock similar to 12.

Ophite, or lustre-mottled melaphyre.

1. Augite in large areas, optically often continuous.
2. Plagioclase, intersecting augite and base.
3. Chlorite.
4. Magnetite, and dark base with some altered olivines.
