

BY HER MAJESTY'S ROYAL LETTERS PATENT.

WOODWARD'S

Patent Improved Gas Carbonizer & Purifier

SECURING

INCREASED BRILLIANCY, DECREASED CONSUMPTION, DECREASED HEAT, DECREASED SMOKE, AND A PURE ATMOSPHERE.

MANUFACTURED AND SOLD BY

ROBERT ALSOP

No. 156 Great St. James Street,
MONTREAL.

By the use of this apparatus the gas is saturated with the vapour of Benzole, and becomes vastly increased in brilliancy, and makes a much smaller amount of the saturated gas equal in illuminating power to a much greater amount of ordinary gas, thus causing a great saving in the consumption.

From the actual working of this apparatus, it has been fully demonstrated that a two-foot burner gives a better and brighter light with the gas thus carbonized than can be produced from a four-foot burner with the ordinary gas.

It will last, when put up, from fifteen to twenty years, without repairs or alteration, there being nothing in or about it to get out of order.
