# PIM'S ROYAL PRINTOGRAPH

## THE KING COPYING APPARATUS.

A CHEAP and useful method for instantaneously reproducing numerous copies of Writings, Drawings, etc., etc., in one or more colors, from one original, at one operation.

Over 300 Copies have been printed from one original by this wonderful invention, which is the perfection of simplicity, and works like a charm. The *Complete Apparatus* consists of a tablet of a fine elastic, wax like composition, a bottle of ink, and a sponge. There is not the slightest difficulty in using it.

The ROYAL PRINTOGRAPH, since its introduction, has given, and is still giving great satisfaction, that those who have used it (as well as other copying appliances) speak of it in the *highest terms of praise*, as shown by the large number of testimonials which we have received from all quarters.

An impression prevails to a considerable extent, that the *Printograph* is the same as the *Lithogram*: such is not the case, although the process of copying is the same, the composition of the *Printograph* is essentially different, and vastly superior, as time and results have proved beyond a doubt. The composition of the *Printograph* retains permanently its moisture and elasticity, whereas others which we have seen, harden, shrink, break, sour, decompose, or have a very disagreeable odour, and are comparatively worthless, although they may look well at first.

The composition of our ROYAL PRINTOGRAPH is an entire secret known only to ourselves, and is manufactured only by us. Its marvellous success, however, has caused worthless imitations and counterfeits to be made, and offered for sale under different names.

### The Distinguishing Characteristics of Pim's Royal Printograph

are—The superiority and durability of the composition, its ease of erasure, adaptability to all degrees of temperature, and large number and clearness of copies. To these important features may be added, *Inks* of various colors, including *Black*: a special Pencil, which will give a large number of copies; and a special ink to be used on Rubber Stamps or Type, by which impressions made by them on paper, and transferred to the tablet, can be copied therefrom in the ordinary way. This is one of the most useful improvements yet made, as it enables parties to have the combination of Letter Press Type and Writing copied by one operation.

### USES.

Price Lists, Discount Sheets, Circulars, Cards, Letter and Bill Heads, Statements, Reports, Receipts, Memoranda, Envelopes, Blank Forms, Labels and Wrappers, Bills of Fare, Programmes, Invitations, Music, Plans, Designs, Maps, Charts, Mechanical, Architectural and other Drawings, Sketches with Pen, Brush, or, Printographing Pencil, Patterns of Scroll Work, etc., etc.

### PRICES.

Larger sizes on hand. Special sizes made to order.

*First quality* re-filled at half the price of instrument. Composition also in canisters at \$1 and \$2 each. *Second quality* composition for re-filling, 50 cents per lb.

### INKS.

We are now manufacturing Five different colours in our superior Printographic Inks, Purple, Crimson, Green, Blue, and Black. Purple is the standard colour. Crimson is excellent, giving as many copies as the Purple. Green, Blue and Black are good, but will not give so many copies as the others. Rubber Stamp and Type Ink (copying).

PRICE PER BOTTLE 25 CENTS,

Special Pencil for Copying, 20 cents each.
