

### DE LAVAL SEPARATOR THE WORLD'S STANDARD

DE LAVAL Cream Separators are the highest type of farm implement made and invariably prove the most profitable of farm investments. They are guaranteed to be in every way as represented, and to fulfil every claim made as a condition of their acceptance by the purchaser. They are sold on as sound a basis as a Government Bond, and their prestige is as solid as the Rock of Gibraltar.

The buyer who puts his money into any other separator to-day and continually wastes some of his product through its use must surely do so without knowledge of the up-to-date DE LAVAL machine, the opportunity for which knowledge is free to him for the asking.

### Direct Draft Damper at Front of Stove Where it is Easy to Turn

No reaching across a hot stove and over steaming pots to turn direct-draft damper on Sask-Alta. It is placed right at front of stove (see illustration) where a child can readily operate it.

Sask-Alta Direct Damper insures your arms against scalding by steam, and fingers from being burned. But you cannot get this feature in any other range. It's patented—an exclusive Sask-Alta improvement. 27

### More Pounds of Hay, With Less Labor

# Dain Pull Power Press

The capacity of a hay press is measured by the pounds of properly-baled hay it will produce in a given time. The more hay it will bale the better the press.

Because Joseph Dain's patented Pull Power gives so great a leverage, and so perfectly equalizes the pull, a shorter sweep is used. Thus, with the Dain, in travelling the same distance as with ordinary press, the horses bale more hay. There is no pitman or other high obstruction for the horses to step over, and the load being so perfectly equalized, the faster-baling Dain press is actually easier on the horses than the smaller capacity presses of other makes.

You can set the Dain Pull Power Press anywhere—and the hay does not have to be forked so far. One man's labor can be saved on the stack. The press and feeder's stand can always be set to avoid the wind and discomfort from chaff and dust. The hopper and feed table form the charge. The man who does the feeding does not have to make a single strained or unnatural movement. The man who does the tying stands up to his work. He does not have to walk around the press.

Thus, you see, the Dain Pull Power Hay Press has the highest record in pounds of hay baled and the lowest in amount of horse-energy and human-energy expended. We are sure if you will investigate the Dain press and its work you will buy it in preference to all others. The Dain Pull Power Hay Press, made by Dain Manufacturing Company, Limited, Welland, Ont., is the ORIGINAL pull power press. Imitators have been obliged to respect Joseph Dain's patents. As long as these patents are in force there can be no other press made equal to the Dain. You should certainly give us the chance to explain the advantages of this press. Send a request by next mail for catalog and other valuable information.
