CARBIDE MINE LAMPS WORK WITHOUT WATCHING

When the flame of a hand regulated lamp gets small the miner either works the raking wire—turns on more water or bumps the lamp against a rock. The first method generates too much gas, the second floods the carbide and the last damages the lamp. The flame of an ITP remains the same size from start to finish of the charge and the proof that the ITP never needs regulating is the simple fact that there is nothing on this lamp which can be regulated.
