POLLY MAKING TEA

The china gleams in bine and white, The twilight hour is swift approac Entranced I note with shy delight, No other callers are encroaching. a cup she designates as mine, With motion of her dainty finger. The kettle boils-oh: drink divine, In mem'ry shall thy fragrance linger. Her kerchief's made in style of yore, Some fairy surely put the hem on. Held sugar such a charm before? Was e'er such magic in a lemon?

She turns away with manner coy,
The firelight shows her beauty clearer;
Oh, why is teasing such a joy!
I wish she'd come a little nearer.

We sit and sip—the time flies fast,
My cup needs filing—project clever!
She comes, and I—grown unboid at last—
Say, "Polly, make my tea forever!"
—Florence Scollard Browne,

IN THE ROCKIES.

I left New York in the spring 1880 for Denver. The population of of that city was at that time only 30,-000. It is now 100,000. It had then only one railroad depot, a crumbling wooden structure, belonging to the Kansas Pacific Company. To-day it has seven depots of brick and granite, wast in space, where trains arrive from all points of the compass in the States. I was only a week in Denver, when an old friend of mine, Mr. Smyth, invited me to accompany him to a Music Hall in Chestnut street. When I en tered the bar room, swarthy and stal-wart miners were dancing with comely women. Others were playing cards. A group of six men stood at the bar, drinking between them half a gallon of rye. Having become intoxicated, they quarrelled. Pulling out their revolvers from their pockets, three of them fired on the other three. In the confusion of the moment, one of them aimed the muzzle of his revolver at me; but luckily I was standing behind the big stove at the time, and stoope thus avoiding the shot, which struck the wall behind me. Smyth, who was with me at that moment, suggested that we beat a hasty retreat from the music hall. When we reached the

street, we were told by a guardian (policeman) that one of the miners was killed, and three wounded. The row was put a stop to by a dozen guar-My first experiences of mining life occurred at Alpine, situated on a level embedded on the summit of a very high mountain, stxty miles from Den-We worked in the mine eight hours a day. Our wages were \$5 a day. The owners of the mines were the Mary Murphy Company. No vegeta-Mary Murphy Company. At the course tion save that of trees was possible on these rock-bound heights; yet after the shaft went down 200 feet, in the course of which we had to blast the rocks with gunpowder, we discovered what is called in the miners' slang the flanked vein, where we dug up large quan-etities of silver. We were sixty miners working in a desolate wilderness. Ten small log cabins, the bed rooms of which had bunks similar to those in

transatlantic steamers, sheltered us.

A lighted stove stood in the centre of the room during the spring, fall, and winter months, when it is terribly cold on the summits of the mountains. yards inside from the confines of the orests. I could not sleep at first, listening to the howlings of the large wolves that infested the woodlands in the Rockies; but I soon got accustomed to the cries, and I could slumber

On a wild night in December, a colossal snowslide precipitated itself against the edge of the forest, and swept down on the valley to the right. If our log huts were outside the limits of the forest, we would have been buried in snow. Twice a month three of the mounted on mules descended the us, mounted on mules, descended the mountain to Alpine, a small village, and purchased a herd of cattle which we drove up the slopes of the uplands to the site of the log huts. These animals were killed by a butcher's knife, and were roasted on a fire of lumber We purchased other provisions, too. I left the mountain for Garfield in the spring of 1881, where in the up-lands, between two huge crags, 100 miners, including myself, excavated a huge pile of "floats" (silver) from the

The company's directors, who were running this mine, imagined that beneath this mountain of Garfield were weins of silver. They gave instructions to the superintendent to construct a tunnel through the mountain. When this work was accomplished there were no veins discovered, and the company became bankrupt, having lost \$2,000,

000 in the venture. The atmosphere upon these rocky heights is so keen and light that our lungs could barely endure it, and we sometimes became dizzy and fainted. One winter's night, while we slept in our log cabins, ten mounted men from an adjoining camp woke us up, and told us to get ready and come along to lynch two Dakota desperadoes

James Long and Dennis Wise—who had arrived at their camp that night and shot two of their comrades. One, a Swede, was robbed of his earnings, \$500, and shot dead afterwards. The other recovered from his wound. This murder was perpetrated on the slopes of the Rio Grande, where our visitors had their camp. "Curly Bill," the leader of the camp, organized a posse of the townsmen of Garfield, who pur-sued and captured the desperadoes, and returned to Garfield, where they locked them up in a calaboose, a dou-

ble-legged cabin prison.

Afterward, ten of the men visited us. When we had put on our clothes, and met our fellow-miners, I was the only man among sixty who refused to doin in what I considered a murder. Curly Bill, the leader of the ten men, muzzle of a revolver to my put the muzzle of a revolver to my forehead, exclaiming: "If you don't join us, smoking guns! I'll blow your brains out."

I. of course, consented to join them,

as I could not relish the idea of dying in my early youth.

Between the hours of midnight and Between the hours of midnight and 10 A. M. we entered Garfield. Two deputies of the State, who were armed and were guarding the two prisoners in the calaboose, were quickly disarmed by five miners of our group. These were ordered by "Curly Bill" to keep the deputies in prison for three hours, during which time they would have an opportunity of hanging the murderers.

the bodies of the criminals, while "Curly Bill" appointed Andy Crawford to shoot or hang them. It was finally, however, decided by the miners that they should be hanged from a tree. Accordingly they proceeded to a wood where one of the Dakota prisoners broke down, and, weeping, asked for mercy. His comrade turned on him a gleam of indignation in his eyes, and poured from his tongue a volley of poured from his tongue a volley of curses on the miserable coward. After they were hanged, twenty miners riddled their bodies with bullets, but I was not of the twenty. The prisoner who was indignant at the cowardice of his friend died game. The two desper-adoes enjoyed the hospitality of our camp a week before the murder.

In the summer of '81 I went to Den-ver, where an official of an engineer-ing company, Mr. Barr, employed me to join the men who were going to ex-plore the Black Canons, situated 600 miles west of Denver on the Pacific side of the Rockies, and 250 miles distant from Gunnison City. Packed trains, yoked to burros (asses), were laden with mining implements, stores, tents and provisions. Twelve of us climbed the mountain the first portion of each day, and mounted the asses in the afternoon. We were sent by the Rio Grande Railroad Company to survey this part of the Rockies. The company desired to take possession of the canons before its rival, the Denver Bouth Park Company, could lay their side of the Rockies, and 250 miles dis-Bouth Park Company, could lay their hands on them, for they were the key,

to Salt Lake City.

These canons were eighteen miles fong, five to 500 feet wide, and were flanked by mountains 400 feet high. During the three months of summer we never saw the sun. The canons were such dark abyses that we had to use our lanterns in exploring them.
The cost of tunnelling the mountains
on the Pacific side of the Rockies was
\$1,000,000; 6,000 workmen, of whom I
was one, finished the tunnel in six
months so that the company held nos months, so that the company held pos session of the only route to the Mormon capital.

In the winter of 1881 I proceeded to Leadville, and worked in the iron silver mines on the Iron Mountains, two miles north of that city. I was not a long time here, when I began to suffer from lead poison. I was ill with the colic and could not eat food. One night, provided with a lantern, as I was promenading down the incline of a tunnel, my head struck against a pair of human legs sticking out from a mass of lumber. I hurried back to the other outlet of the tunnel, reached the surface, and told the superintendent that there was a dead miner in the ruins of one of the entrances to the tunnel which had caved in. He sent two miners and myself to extricate the remains of our comrade. When we lifted the timbers from his frame we found that all his bones were broken, and he presented a ghastly appearance. His corpse was terribly mutilated, and blood was issuing from its every vein, while his face was

Soon afterward I was running t fevel (digging in a level tunnel for ore), with Shes, a comrade. The soil was so rocky that we had to work with giant powder in blasting this impediment to our mining labors. Shes and had reached the heading of a level, a large boulder from the roof of the tunnel fell on my comrade's head and tilled him. This was my third escape

from death. My next adventure occurred in th spring of 1882. I was working on the Helvetia mines on the western flanks of the mountains. The shaft was 650 feet deep. One morning seven of us embarked from the surface in a bucket attached to a rope, held by the en-gineer and his subordinates. The engineer imagined we had reached the end of the shaft. So he dropped the bucket when it was fifty feet above the ground, and it fell with an appaling swiftness. When it touched the soil a loud crash was heard, and the bucket was smashed into atoms. One miner had his chin broken, another broke his leg, but I escaped with a few scratches. I fancy I must have had a charmed life in the Rockies.

In the spring of 1884 I proceeded to the Iron Mountain. I was asked to

work on the top of the shaft one stormy night, when a simoon swept the hills, and it was pitch dark, despite the light of the two lanterns. The bucket lay in a four-wheeled car, and was covered with snow. When, push ing the car before me to the edge of the shaft, I slipped on an ice-bound rock and lost my hold of the car.
When I got on my feet, that car was perilously near the brink of the shaft. I realized instantly that there were three men at the bottom of the shaft. I made a furious effort to catch the bucket's rope. The car pulled me down twenty feet of the shaft, but I down twenty feet of the state, but I held, fortunately, the rope of the bucket, when the car fell down with a crash on the mine. With the aid of

the rope I finally reached the surface.

My friends must have been killed
by the fall of the car, I imagined, but
then I reflected that, as they were
working a few feet from the shaft in
the interior of the mine, the fall of the car could not have killed them. I dowered the bucket, and pulled it up with all my strength. It was occupied by three live men who reached the surface safely. A great load of sorrow was lifted from my heart when I grasped their brawny hands. I got weary of my four years' mining, and proceeded to Brooklyn, where I started a business establishment.

Demand for Ivory.

Ivory is becoming scarcer every year and the time is not far distant when the supply will be absolutely insufficient to receive the result. cient to meet the demand. The entire cient to meet the demand. The entire supply for 1894 amounts to 8,855,000 pounds against nearly 10,000,000 pounds for 1893. Owing to the increase in exports from the Congo Free State, Antwerp heads the ivory markets of the world with more than half of the entire suppy, or 4,862,000 pounds London imported 2,400,000 pounds and Liverpool about 1,500,000 pounds of the costly tusks. The small balance was scattered among other ports. A was scattered among other ports. A substitute for ivory, artificial or natural, is badly wanted.

"Bein' funny," said Uncle Eben,

in knowin' how es it is in knowin'

A ONE-SIDED BATTLE.

It attacked by a wild beast a man would try and defend himself. If afflict-ed with rheumatism fight the disease. ed with rheumatism fight the disease. With Dr. Hall's Rheumatic Cure the battle is all one-sided. Thomas Todd, Lockmaster at Brewer's Mills, Out., suffered for twelve years with rheumatism in his shoulder and at times could not work or dress himself. Eight bottles of Dr. Hall's with Climax Iron Tonie Pills, affected a permanent cure. This great blood purifier is put up in bottles containing ten days treatment. Price 50 cents at all dreg stores or The Dr. Hall Medicine Co., Kingston, Ont.

"I clum in the window," explained a Grove avenue boy to his mother.
"Clum?" gently enquired the lady, by
way of correction, "Well, clim, then," mended the boy.

"Have by some surgeon, Shylock, on thy charge to stop his wounds lest he do bleed to death." People can bleed to death. The loss of blood weakens to death. The loss of blood weakens the body. It must follow that gain of blood gives the body strength. The strengthening effect of Dr. Pierce's Golden Medical Discovery is in large part due to its action on the blood-making glands and the increased supply of pure, rich blood it produces. It is only when the blood is impoverished and impure that disease finds a soil in which to root. The "Discov-ery" purifies the blood and makes it antagonistic to disease. When the body is emaciated, the lungs are weak and there is obstinate lingering cough, "Golden Medical Discovery" puts the body on a fighting footing against disease, and so increases the vitality that disease is thrown off, and physical health perfectly and permanently restored. It has cured thousands who were hopeless and helpless, and who had tried all other means of cure without avail.

without avail.

Thirty-one one-cent stamps to cover expense of mailing and customs will obtain a copy of Dr. Pierce's Common Sense Medical Adviser, 1000 pages, in paper cover. Send 50 stamps if cloth binding is preferred. Address Dr. R. V. Pierce, Buffalo, N. Y.

Original jokes will be received when accompanied by a \$5 bill; not neces-narily for publication, but as a guar-antee of good faith.

Pimples and Blotches

how unsightly, sometimes disgusting, mortifying to the sufferer and unpleasant to all. An evidence of poor blood and lowered vitality of the eliminating organs. They need toning up—the whole system does. You can quickly bring about the improved condition by using Ferrozone. Poisons are driven out of the blood, organs grow stronger, the blood richer, the nerves stronger. Pimples and blotches disappear, color becomes good.
Glad! just try and see how much joy
can be gotten out of a box of Ferrozone. Sold by McCall & Co.

He has told me he loved me," said the fair girl confidingly, "but I don't know whether to marry him or not." "Don't you think he tells the truth?" "I am sure he does his best to tell the truth. But, you see, he works in the weather bureau."

DIMINISHED VITALITY.

Some people talk very flippantly They don't stop to think that vital-ity is the principle of life—that it is that little understood something on which every function of their bodies depends.

Diminished vitality is early indicated by loss of appetite, strength and endurance, and Hood's Sarsaparilla is the greatest vitalizer.

THE FAMOUS GENTRY SHOW

Kindness, Gentleness and Love.

The above words are said to be the solution of Prof. Gentry's phenomenal success in the management of animals. In a recent interview he is quoted as having said: "Kindness is the only method I pursue in training my animals for exhibition." And he added: "The gentleness with which I handle them and the love of the work has, I think, allowed me to go further in their education than any other gentleman in a similar line." The entire company of dogs and ponies, over a hundred in number, are to exhibit in this city under their tent at 2.30 and 8 p. m., Tuesday, Sept. 3. The engagement of these talented animals can be looked forward to with great delight by the best class of people to whom Prof. Gentry's famous and inwhom Prof. Gentry's famous teresting exhibition appeals.
