SOLIGNUM.
A Remarkable Test! Locally made by
Messrs. W. & G. RENDELL.
To test Solignum as a preservative for Wood against the at-
tacks of Worms, we tried a piece of 2 x 4 Spruce, about two feet
in length, by painting one-third with Solignum, leaving the
balance clear wood, this we suspended by a wire through the
centre, in the water about one foot from the bottom, imme-
diately over a pile of stones the remains of a sunken wharf
(which is the place where our Wharf Shores are eaten off first)
for Three Months. On taking it up at the end of that time we
found some half-dozen small holes only a very short distance
in the clear part of the wood, which shows the liquid had pene-
trated through the whole piece and the worms had hardly
begun boring before coming in contact with it.
Last year as a test of some brands of Copper Paint we
handle, we had a similar piece of wood treated at both ends,
leaving the centre third clear; this was in exactly the same
place as the piece for the Solignum test for Three Months and
Three Days, when taken up the painted ends were perfect but
the centre was riddled with worm holes.
Both these pieces of wood are to be seen at our Office by
those interested in the preservation of Wharf Piles or any other
wood work.
