Wallace Silverwear.

Is your Table Silver as good to-day as when you bought it?

Have you noticed that at the parts most exposed to wear, the plate has become worn?

Do you think this condition of your Silver is in keeping with your idea of a well appointed table?

Then why not, when you decide on replacing your old ware, give place to it with the "Wallace" Brand, the Silver that refuses to wear and is guaranteed without time limit.

Start with the Tea Spoons and gradually complete your Set with the one pattern—there are several for you to choose from and the price is very moderate.

Tea Spoons cost \$3.00 for a Dozen.

Forty-Four Years in the Service of the Public—The Evening Telegram.

Newfoundland's Industries.

A FUTURE RICH WITH PROMISE.

(By Capt. Victor Gordon, Acting High Commissioner for Newfoundland.)

From the report of the Newfoundland Board of Trade, covering the period January 1 to December 31, 1922, some interesting information can be obtained as to the conditions of trade in Newfoundland. There has been for some considerable time a state of depression in the island's commercial affairs, largely due to the exceptional situation which Newfoundland occupies within the Empire—its isolated position at the gateway to North America and its complete dependence upon foreign purchasers for the disposal of its chief articles of export.

The main industry in Newfoundland is the cod-fishery, and it is not generally known in this country that Newfoundland supplies most of the peasant populations of Spain, Portugal, Italy, Greece and Brazil, and, to some extent, the West Indies, with their main food supplies. In the post-war period, however, the financial condition of Europe has rendered it well-nigh impossible for Newfoundland to market its fish with profit. The consumers of this fish in the foreign countries named have to pay for it in sterling in London, but since the war affected exchange conditions they have been unable to pay the prices they formerly did. Newfoundland used to ship a great deal of fish to Italy, but owing to the disturbed conditions in that country this trade has fallen off. In Spain there are still occasional good returns for first-grade fish; and Portugal, at the present time, is probably the largest consumer. The political conditions in Greece have closed that market to a large extent.

New Markets for Fish.

For two or three generations Newfoundland has been dependent upon the fishing industry—a state of affairs which now calls for the wisest consideration of the Government. There is as much fish in the seas around Newfoundland now as ever, but the conditions under which it is taken and marketed have greatly changed, and, according to the Board of Trade, we need to improve our methods of curing and grading.

It is estimated that during 1922 1,300,000 quintals of codfish were taken, but there are no definite statistics as one year's supply overlaps another, and it is impossible in the remote districts around the coast of the island to obtain accurate information as to the quantities obtained. For several generations the codfish trade has been carried on in sailing vessels, and there is a world of romance bound up in that side of the Colony's business life. This habit of shipping salted codfish across the seas in small sailing vessels, in the face of the wildest Atlantic storms and gales, has developed a race that knows no fear and has no thought of danger. The day of the sailing vessel is, however, passing by, and before very long steamers will entirely replace the picturesque barques, brigs and barks. The fishermen that have served their time so faithfully in this perilous trade. The insurance rates on sailing vessels are so high these days—from 7½ per cent. to 8½ per cent. as against one half of one per cent. or less on steamers—that the mercantile community is compelled to make the change.

Dependence on Foreign Countries.

Newfoundland would like to develop a larger trade in fish with British countries. At one time it had a valuable connection with the West of England, whence most of the people in the Dominion have sprung, but in recent times this trade has drifted either to its Icelandic and Norwegian competitors, or to the fishing centres on the north-east coast of Great Britain.

It is an unfortunate circumstance that Newfoundland is so entirely dependent upon foreign countries for the marketing and consumption of its main product. That fact has taught us that we must in the future extend and develop our resources in minerals, agriculture and forest lands.

The salmon fishery of Newfoundland is an industry that is capable of

vast expansion, and that is true also of the lobster fishery, which was valued at \$250,000 last year.

Vitamins in Cod Liver Oil.

One of the main by-products of the cod-fish industry is cod liver oil. Quite recently a report was issued by the Medical Research Council, as the result of an examination conducted by Dr. S. S. Zilva, of the Lister Institute of Preventive Medicine, as to the comparative value of Newfoundland and Norwegian oils. It should be explained that cod liver oil is particularly efficacious in the treatment of tuberculosis and other wasting diseases, because of certain vitamin qualities it possesses. All the oils produced do not, however, contain these valuable nutritive elements. Dr. Zilva has investigated the methods of producing the Newfoundland commodity, and reports that it is consistent in its purity, and, owing to the rigid inspection of the processes employed in its manufacture, is of a regular and superior quality. The cod liver oil produced in Newfoundland is taken from the fresh livers of codfish, whereas in Norway the oil is produced from a "mixed catch," that is, other fish are thrown in with the cod for the production of the oil.

An Industrial Future. There is no doubt that Newfoundland in the future will make great strides along the path of progress. The Dominion has a wonderful heritage in its mineral resources. Hardly anything is known of the great copper deposits, of the gold that is to be found on the island, and of the great variety of metallic and mineral substances waiting to be exploited. The iron ore deposits at Bell Island have high grade deposits sufficient to last, at the present rate of production, for 3,600 years.

The pulp and paper industry of Newfoundland has already proved profitable, and influential London newspapers are now printed on paper which the island produces. Plans are now being made for the establishment of another large pulp and paper industry on the west coast, and for the development of hydro-electric power by utilizing some of the vast water power which are available. This enterprise is largely under the control of Messrs. Sir W. G. Armstrong, Whitworth & Co., Ltd., and bids fair to eclipse all other business undertakings on the island. With this and other new industries established, the future of Newfoundland is rich with promise.

Tests for Fatigue.

Most persons know well enough when they are tired, and tests to reveal fatigue may appear quite superfluous. Yet the study of fatigue is of the highest importance in the industries and the lack of accurate methods to detect it in early stages and to measure its amount makes such study difficult or impossible. An editorial writer in The Journal of the American Medical Association (Chicago) tells us that recent investigation has proved the untrustworthiness of some of the most complicated tests hitherto devised, and he urges further study of the subject. The present ways of handling the human machine, he asserts, are empiric and crude. Experience has taught most of us that the proper way of dealing with the workers, and experience is conceived to be the best guide. The thought that the worker is a physiologic mechanism and should be treated as such, is regarded as fit for the laboratory, but not "practical" enough for the factory. He goes on: "Every one realizes that the foremost limiting factor in work is fatigue, the antidote to which is rest. Incidentally, the condition of personal health is one of great importance in the readiness with which fatigue ensues, and, conversely, some persons believe that fatigue has a large share in the promotion or transmission of disease than has any other single casual condition. The admittedly important study of the phenomena of fatigue hinges on the availability of suitable methods of investigation. Fatigue must be detected with assurance and measured with some approach to reliability, if it is to be accepted as an index of bodily fitness, and if physical performance is to be gauged in accordance with its dictates."

Within recent years a considerable number of physical tests have been proposed as indicators of fatigue in human beings. Some of them have found useful application in furnishing evidence of the changes in physiologic "fitness" attending pathologic states or exertion under extreme conditions of environment. There can be little doubt of the importance of having a procedure like Martin's "resistance strength-test" or "spring-balance muscle test" for measuring the muscular impairment in such conditions as infantile paralysis. It is one thing, however, to detect pronounced physical deterioration, and another to measure physical fatigue resulting from the usual routine of healthy work. In connection with the latter, Lee and Vanbuskirk of Columbia University have failed to find a reliable criterion of the daily physical fatigue of the individual in any of the tests heretofore proposed.

The human electrocardiogram (record of heart-action) fails to reveal changes due to such exercise as walks of 14 miles entail in untrained persons. The skin reaction was undependable in healthy persons, as were

Not Difficult For A Thinking Woman

WHEN you go into your grocer's and hear a woman demand Kirkman's Soap, refusing to accept any other, it is not difficult to understand her reasons.

She knows that Kirkman and Son use only the finest materials to make their soap the best for every household and laundry use. And she knows that Kirkman has been a mighty long time in business. (86 years, to be accurate.)

Also, she knows from experience, that Kirkman's Soap is as harmless to the hands as the most exquisite toilet soap, because it is free from lye which reddens and chaps the hands.

SHE has learned, too, that the suds do not fluff or fade away, but can be depended on to furnish plenty of cleansing body for even the heaviest woolen garment.

If you could personally hear this woman's experience with various soaps, you, too, would always demand Kirkman's, because a pure, honest soap is the only kind you should use.

The Economical Soap for Intelligent Women

Your Hands Will be Grateful

Trade Reprisals are Threatened.

New York Paper Talks of Revenge for Pulp Embargo.

New York, July 18.—(Canadian Press.)—A "war of trade reprisals" between Canada and the United States is predicted by the New York World if the pulp wood embargo authorized by the Canadian Parliament is put into force.

The World declares the embargo would mean the closing of many United States mills along the border, curtailment of production in other mills, and the transfer of "another big fraction" of the paper industry to Canada, as well as "war time prices" for paper, and continues: "It would mean more than this. Enforcement of the embargo would undoubtedly start a new war of trade reprisals between the two countries. Retaliatory measures from this side could begin with coal, oil (sulphur and other necessary supplies for Canadian mills, and extend beyond. No one would be hurt, and it will engendered all around."

The World declares the situation calls for reconsideration of the whole trade situation as between Canada and the United States. "We have to remember that the Fordney-McCumber tariff hits Canada a hard blow,

and is largely provocative of Canadian present action," it asserts. "Commissions are called for from our side as well as from their side."

McMurdo's Store News

THE EVER HOT BAG.

We have just received a shipment of the Ever Hot Bag, and though it is not the time when one requires hot water bottle, still these are wonderful and so useful that we want you to know we have them. Think no hot water is required. Two or three teaspoonfuls of water make it hot and keep it for 24 hours. No danger of scalding from breaks or leaks. It is ideal thing for a sick room, and save your life, as it can be immediately, no boiling water required. For the baby's pram, motor car, when you travel, matism and all emergencies, should have one as it cannot burn, burst and needs only two or three teaspoonfuls of cold water to make it hot. Price \$3.75.

Make a good butterscotch to be served with desserts. Boil together 1½ cupfuls of brown sugar, cupful of corn sirup, 4 tablespoonfuls of butter until it forms a ball in water. Then add ¼ cupful of cream, and stir well before using.
