settlers. A large portion of the riding fronts on Burlington Bay and Lake Ontario.

The climate is decidedly healthy.

The continuation of the Queenston Heights, stretching across Saltsleet, Barton, and Ancaster, causes considerable broken land in these townships. The land lying below the Heights-or what is commonly called "The Mountain"-is generally flat. Soil: sand. sand-loam, clay, and clay-loam. Above the Mountain the land is neither flat nor hilly, but gently and beautifully rolling. The soil, as below the Mountain, is irregularly distributed; loam and clay may be found in every town-On the whole, the soil is excellent, producing, with good culture, heavy crops of grain of every description, grass, and roots.

With very few exceptions there seems to be no regular system of culture. The sixcourse husbandry - thus designated: 1. drilled crops of all kinds; 2. spring wheat, or barley, or oats; 3. clover meadow; 4. pasture; 5. peas; 6. winter wheat-has been followed to some extent, but on the old cleared farms the five-course husbandry has become more popu-Under the five-course husbandry, onefifth of the farm is each year occupied as hereunder: - 1. drilled crops, turnips, potatoes, and Indian-corn; 2. barley; 3. clover meadow; 4. pasture; 5. wheat (varied occasionally, 4. wheat; 5. oats), though it is not approved to sow two grain crops in suc-This beautiful system keeps the cession. land always in prime condition, and no crop being too often repeated, the properties of the soil necessary for its growth are not exhausted.

Under draining is but little practised yet, but where it has been done the result has been highly satisfactory.

The average return of crops for 1859 were

as follows:

Fall Wheat,	15	bushels per acre.
Spring Wheat,	25	u -
Barley,	30	46
Peas,	26	"
Oats,	42	"
Indian Corn,	60	bushels of ears pe
acre; much injured by frost.		
		bushels per acre; ro
to the extent of one-third.		
Turnips,	21	tons per acre.
Mangel Wuzel,	18	u i
Carrots,	25	44
Clover Hay,	4	a
Timothy Hay,	1	

The fall wheat throughout the riding considerably injured, the midge having more damage than in 1858. The evertoremembered frost of June contributed its of destruction. Some fields were endestroyed by the latter. The rust also concluded its share of mischief. Upon the with the winter wheat was injured to the extended to the extended that the cone-half.

The hay crop was also much injured by June frost, which reduced the yield cons ably; many old meadows not being work ting. Owing to the very fine growings however, the afterswath was very luxu producing a good crop of clover seed.

Average value of farm land,—\$55 per MANUFACTURES.—The Cold-Spring of Factory, owned by Messrs. H. & A. Egie situated on the Cold-Spring Creek, in township of Ancaster, manufactures hatinett, tweeds, cloth, and finnel.

Messrs. Theursson & Co., and McDonald & Gurnett, of Ancaster, are celebrated for their threshers and separ of which 50 to 100 are manufactured is shop yearly.

Messrs H. & A. Egleston, of Ancaste lage, iron-founders, and makers of cloth facturing machinery, ploughs, stoves &

Mr. J. G. Crane, Ancaster, manufactures, drawers, and hosiery, comfavourably with imported goods of that Mr. M. Wiard also manufactures

Mr. M. Wiard also manufactures of ploughs, gaug p'oughs, and seed drills superior description.

Adam Condie, of Bartonville, manufa

iron and wood ploughs.

Sawed lumber is manufactured to so tent. We have in the county a good ply of grist and flouring mills.
