

of pottery have also been found, the crescent being a favorite ornament, and several utensils of a crescentic shape having been discovered.

Then, as time went on, men improved upon their earlier works, and took to metal instead of stone, as examples of which may be mentioned the wonderful series of metallic objects that have been found in the lakes. There are axes, spears and arrow-heads, necklaces, bracelets, and hair-pins, and — most remarkable — there is the very article that was patented some years since as the "Safety Pin" for nurseries.

As to the food which these people ate, we have abundant evidence in the way of bones

belonging to various animals, and — strangest of all — specimens of bread have been discovered. As may be supposed, the bread in question was of the coarsest possible character, the grains of corn being roasted, slightly ground, and then pressed into lumps, which may by courtesy be termed cakes. Even fruits have been found ready cut and prepared for consumption, the apple being the most plentiful of these fruits. Seeds of different fruits, such as the plum, the raspberry, and the blackberry, have been found, together with the shells of hazel and beech-nuts, showing that all these different fruits were used for food in the olden times now so long passed away.
