Transplanting Trees

How to Make Trees Comfortable at Moving Time

In a planting tree to make it grow—and there should be no other aim—the tree should be made just as comfortable in its new environment as possible. If the land is wet it should be drained, for trees will never thrive with wet feet. The best results are obtained by preparing the land the previous year for the setting of the trees. Clover plowed under in the Fall will make humus the following year and keep the soil moist about the roots. Trees will often do well in poor soils and unfavorable conditions if good soil is placed about their roots, so that they get a good start the first year or so. After they once become established they do considerable towards taking care of themselves.

The hole dug for a tree should be large enough, so that the roots may be spread out naturally in all directions. Yet it is not necessary to dig very wide holes if the trees are heavy-rooted, for the roots of a tree always need trimming back at transplanting time. Cut back all roots larger than a lead pencil, leaving a clean-cut surface. Remove all broken or lacerated roots and those that become dried and dead. The cut surface should always show fresh, living wood. When these clean-out surfaces come in contact with moist soil the cambium grows out over the head and forms a callus, from which new roots start very readily.

TRIMMING AND PLACING THE ROOTS

In trimming the roots it is best to make a sloping cut, with the cut surface facing downwards. When such a tree is set, the cut surfaces will always come in contact with the soil, and the callus forms readily. It is thought by some that the cut surfaces facing downward cause the tree to become deeper rooted than when cut otherwise. This may have some effect on making trees deep-rooted, but more, doubtless, depends on the nature of the soil.

If the ground is a hard clay in the bottom of the holes, it will pay to haul good earth and put a shovelful or two in each hole. As the tree is lined up, it should be placed so that the large or main roots are in line with the prevailing wind. It will be noticed by those handling trees that the largest or main roots usually grow in directly opposite directions from the base of the trunk, and seldom at right angles to each other. These large roots form a sort of root axis, which are sometimes known as the brace roots of the tree. If care is taken in setting the trees, so that the brace roots are in line with the prevailing winds, the trees will be firmly fixed and not easily affected by storms. If, on the other hand, the main root axis is placed at right angles to the prevailing wind, the tree is rocked backwards and forwards, as if on a hinge. Attention to this point will save many trees. The neglect of it is often seen where the collar of the tree works a hole three or four inches across. This, of course, causes great loss of moisture and injury to the roots. Trees should usually be tilted a few degrees towards the direction of the prevailing wind.

THE PLANTING BOARD

One of the quickest and most accurate methods of setting trees is by the use of the planting board. This board is usually six feet long and four inches wide. It has a hole bored near each end, and on the middle of one side, exactly between these holes, a notch cut about half-way through the width of the board. When the ground is staked out and everything ready for planting, the planting board is placed so that the notch is close about the stake where a tree is to be set. Iron or wooden pins are thrust through the two holes of the board; then the board is lifted off one pin and thrown around on the other, out of the way. The hole is then dug, and when the board is swung around and dropped over the first pin the notch will indicate exactly where the tree is to be set. By bevelling the notch a trifle, the slope to the prevailing winds may be given by fitting the tree every time in the notch.

This method is rapid and so accurate that orchards may be put in on straight line without the trouble of sighting the trees.

Filling in the holes is the most important step in the whole operation. To get the best results, moist soil must be placed closely about the roots so that there will be no airholes or crevices. The best instrument for accomplishing this work is the human hand. When the tree is placed in position the roots are spread out and a shovelful or two of the finest and best earth thrown upon them. This should be carefully worked into the crevices with the fingers, and when the hole is about one-third full, all the earth should be tramped down solid. The bigger the better, the heavier the man, the better for the tree. There is little danger of tramping it too much, but trees often die for lack of tramping. After the roots are all covered and packed in tightly, the hole may be filled with the remainder of the earth. The surface should be left loose; tramping it would pack the soil so that it would lose moisture and dry out the trees. A mulch of manure about each tree is a good thing to conserve moisture.

New Ideas

Having ascertained through practical knowledge of plumbing and heating various new Ideas I am prepared to

Save about 20 per cent on the cost of installing

Estimates furnished on Hot Water, Heating and Plumbing. Also Hot Air. Agent for Peerless Water System. Write or Phone.

MAKES HAIR GROW

All drug stores sell SALVIA, and it is guaranteed to grow hair or money back.

The time to take care of your hair is when you have hair to take care of.

If your hair is getting thin gradually falling out, it cannot, be long before the spot appears.

The greatest remedy to stop the hair from falling is SALVIA, the Great American Hair Grower, first discovered in England. SALVIA furnishes nourishment to the hair roots and acts so quickly that people are amazed.

And remember, it destroys the Dandruff germ, the little pest that saps the life that should go to the hair from the roots.

SALVIA is sold by first-class druggists under a positive guarantee to cure Dandruff, stop falling hair and itching scalp in ten days, or money back. A large bottle costs 50c. The word "SALVIA" on every bottle.

Sold at Clark's Drug Store.

Wheat's Liment Cures Dandruff

UNDERSTAND PAINT!

Before you paint or let the contract, inform yourself thoroughly. Get endurance truths first. Vague impressions mislead. You need intimate, exact knowledge.

A unique formula that gives unique wear is revealed in its relation to your pocket in a gladly-free booklet. Said formula is unique because its makers hold an exclusive advantage in Canada's Paint market. The booklet specifically details
