

THREE PIECES OF VARYING OR EVEN THICKNESS IN ONE OPERATION

IS WHAT CAN BE DONE ON OUR NO. 227 TWIN BAND RESAW

Our Twin Band Resaw is rapidly displacing the single machine in many of the leading planing mills, box factories, etc., all over the country.

This is due to the fact that its economical production and double output over the single machine is being readily appreciated by progressive manufacturers.

ECONOMICAL PRODUCTION AND DOUBLE OUTPUT

are the results of our Patent Knife-Edge Straining Device, which permits of running the thinnest gauge blade at twice the speed of any other saw without danger of breaking.

CAPACITY

This machine will resaw timbers 24 inches wide and 10 inches thick. It will saw a board into three pieces each 3-16 inches thick, or three of any other thickness up to 3 inches each. It will saw one piece 3 inches, one 6 inches, and one 1 inch—or any combination less than these. By adjusting the movable saw out of the way, the machine may be used as an ordinary resaw, sawing up to 3 inches on one side and 6 inches on the other.
