has been overcome by the products of the dairy and the large harvest, and the fair prices they have realized. The new, progressive industry in dairy products shows the exports of cheese alone through Montreal and New York to exceed \$4,000,000 annually.

I have thus endeavoured, as Treasurer of the Province, to present such a statement of its financial affairs as I hope will enable all hon. members to fully understand them, and I trust no one will be under any apprehension that, so far as regards the financial affairs of the Province, there has not been careful management by the Government. If the administration of the financial affairs of the Province by the present Government is understood according to the true facts, and a proper interpretation of their actions, I am convinced that the Government will deserve to retain the confidence of this House and of the different constituencies of the Province. While the financial affairs of the Province have thus been well administered, the course of legislation by the Government has been such as to promote the best interests of the country. This Administration has endeavoured not to be neglectful of the public interests. I thank the House for their patient hearing. (Cheers.)
