

WOOL

Farmers who ship their wool direct to us get better prices than farmers who sell to the general store.

ASK ANY FARMER! who has sold his wool both ways, and note what he says—or, better still, write us for our prices; they will show you how much you lose by selling to the General Store.

We pay the highest prices of any firm in the country and are the largest wool dealers in Canada. Payment is remitted the same day wool is received. Ship us your wool to-day—you will be more than pleased if you do, and are assured of a square deal from us.

T. A. KING, Milton, Ont.

Questions and Answers.

Miscellaneous.

Cutting Out Old Wood.

In my orchard is a lot of old wood which I believe should be cut out. When is the proper time to do this? **E. F. G.**

Ans.—The old wood may be taken out whenever you have time. Pruning out live wood in the spring tends to produce suckers. However, the old wood could be removed either in the fall or spring without affecting the trees.

Spring Wheat.

I sowed spring wheat in November of 1917 and secured a good crop. Would this grain be all right to sow next spring? Would you advise seeding this fall? **A. D.**

Ans.—It is unusual to sow wheat as late as November. The seed merely laid in the ground over winter and commenced germination when the spring opened up. We see no reason why this grain should not be all right to sow next spring. As a rule fall wheat is sown the last of August or early in September. It should have a good start in the fall and be ready to harvest in July.

Sweet Clover.

I have 8 acres of sweet clover standing about 6 feet in height on the 30th of June. The honey bees are on it in millions. I wish to cut this for seed. How many bushels per acre is an average crop? When should it be cut? Would it have been better to have pastured a little in the spring? I sowed from 18 to 20 lbs. per acre; would a lighter seeding have been better? **J. H. R.**

Ans.—The first crop may be harvested for seed, although it would possibly be more economical to pasture early in the spring or else take a cutting off for hay and allow the second crop to mature for seed. It should be harvested when three-quarters of the seed pods become dark. Harvesting can be done with a binder, and further operations carried out the same as with other grain. Handling should be avoided when the straw is very dry, as the seed will shell badly at such a time. It should, however, be thoroughly dry when threshed and hulled. The yield per acre runs anywhere from 2 to 8 bushels. We do not advise any lighter seeding.

Seed Wheat—Sheep Farming.

What produces the small balls of wool-like material which I am enclosing? Could the insect be cultivated so that this wool might be produced in sufficient quantity to make it profitable?

2. Is the Government making any provision for seed wheat this fall?

3. What variety would you recommend sowing on very rich loam?

4. Is 5 pecks to the acre heavy enough seeding?

5. How is wheat treated for smut?

6. How many sheep could be maintained on feed consumed by an average cow?

7. What would be a reasonable income to expect from 25 good ewes?

8. Is the Shropshire breed as good as any? **H. V.**

Ans.—1. We cannot say definitely what insect produced the material sent to this office, but it looks very much like the wool which grows on the body of the woolly aphid. It would not be practicable to keep these insects for the production of wool.

2. The Government are planning to import a quantity of fall wheat to make up for any deficiency in Ontario, and are also endeavoring to have proper distribution of the seed produced here.

3. Dawson's Golden Chaff is as good a variety as any.

4. We would prefer around 7 pecks, rather than 5.

5. The wheat may be sprinkled until all the kernels are dampened or it may be immersed in a solution of one pint of formalin to 30 gallons of water and thoroughly dried before sowing.

6. It would be rather difficult to say, as some animals eat much more than others. From three to five would be a close estimate.

7. One might expect an increase of 150 per cent., or an average of a lamb and a half to each ewe. With lambs selling at \$20 per cwt. there would be an income of over \$700. If the sheep yielded 9 lbs. of wool apiece there would be a further income of over \$160.

8. The Shropshire is a good breed of sheep.

Canadian National Exhibition

Aug. 26—TORONTO—Sept. 7

300,000 admissions sold first day of advanced sale. Come with the crowds to the greatest Exposition in the 40 years' history of the C. N. E.
