THE NEW SPEAKER.

Admirably Fitted For His New Position
Is James William Lowther, Who Succeeds Speaker Gully.

James William Lowther drops quite naturally into the position of Speaker of the House of Commons, for which he is admirably fitted, having spent a number of years as chairman of Parliament committees and as Deputy Speaker of the House of Commons. He simply reveals in Parliamentary procedure, says the Marquis de Fontenay, its intricacies are to him as interesting as any chess problem, and it is because he knows the rules of the game better than any man in the House, has extraordinary patience combined with firmness, and does not even allow a Cabinet Minister to wander from the straight path that he has been proclaimed worthy of the confidence of the lower House of England's Legislature.

He is a tall, well built, clear complexioned, brown haired, fair bearded Anglo-Saxon, wearing his beard close cropped, and he is particularly English in the quiet, unaffected, sensible tone in which he approaches every question, altogether free from violent gestures or heated invective. He is a methodical man, and is known to keep a diary which will seem to furnish interesting reading, as he has seen much of English and Continental life, especially the latter, when his father was charge d'affaires at St. Petersburg and at Berlin.

Formerly he was known as one of the best amateur actors in England, and at one time belonged to a troupe of amateurs known as the "Canterbury Stagers," in which Alfred Lyttelton, now Secretary of State for the Colonies, and Lord Crewe, former Viceroy of Ireland, were the shining lights. Lowther, indeed, figuring on the playbills as Lowther R. Cade, a play on the name of a once popular but now defunct arcade of shops leading off the Strand, similar to the Burlington arcade, and which bore the name of the Lowther arcade.

It was the latter which led Ireland to be nicknamed Lowther Arcadia when the late Jimmy Lowther of Jockey club and sporting fame was appointed by Lord Beresford, to the amusement of everybody, to the post of Secretary for Ireland. Although a rabid Tory, yet he got on wonderfully well with the Irish party, the bond of sympathy between them being of a sporting rather than of a political character. His tastes appealed to them, and he could not help feeling kindly in return.

His namesake, the new Speaker, is married to a daughter of Lady Mildred Beresford Hope, sister of the late Lord Salisbury, and thus he has become through his marriage a first cousin of the Premier, Arthur Balfour, the son of another of the late Lord Salisbury's sisters; and he is also a cousin of the present Marquis of Salisbury, who is in the Cabinet. He is handy with the pen—indeed, one of the best penmen in England—and a particularly clever artist, excelling at caricature. Indeed, it will be a novelty to have in the Speaker's chair a dignitary who will be able to relieve the tedium of the debates by caricaturing the orators, and the knowledge that they are exposing themselves to this may possibly serve as a more efficacious restraint to the unruly ones than any measure of "cloture."

The Lowthers have from time immemorial played an important role in the annals of sport and of politics. Nor is their name unknown in the world of letters. For the poet Wordsworth owed much to them. His father was the factor of manager of the estate of the Earl of Lonsdale of his day, and was brought up, indeed, on the Lowther domain, in a great measure at the expense of the earl, to whom he expresses his profound sense of obligation in his dedication of "The Excursion."

Chapters could be written about the Lowthers, about their strange family legends and superstitions, about the extravagances and extraordinary doings of the Earl Lonsdale, who was known by the name of "Black James," and of another who was known as the "wicked earl." They present head of the house, the fifth Lord Lonsdale of the present creation, is the champion in England of his friend Emperor William. The new Speaker's brother, Gerald Lowther, was for many years secretary of the embassy at Washington, and is married to the daughter of Altherton Blight of New York. He is now Minister at Tangier; and yet another brother, Harold, formerly in the army, makes his permanent home out in Montana, where he has a big ranch.

Famous Pictures Sold.
Many British aristocrats crowded Christie's auction rooms in London the other day on the occasion of the sale of 52 pictures of Lord Tweedmouth's family collection. They brought on an average \$5,000 each.

Sir H. Raeburn's portrait of his wife sold for \$45,694, which is a record auction price for a picture by that artist. The purchaser is said to be J. Pierpont Morgan.

Other sales in the collection were as follows:—An Assembly at Wanstead House, W. Hogarth, \$14,435; portrait of a lady, J. Hoppner, \$19,685; Dancing Dogs, G. Morland, \$21,000; portrait of the artist, Sir H. Raeburn, \$23,615; portrait of Mrs. Oswald, Raeburn, \$18,900; portrait of Sir Walter Scott, Raeburn, \$5,250; portrait of the Countess of Bolton, Sir Joshua Reynolds, \$34,650; Simplicity, Reynolds, \$10,500; portrait of Miss Anne Dutton, Reynolds, \$9,450.

A portrait of Robert Burns, by Alexander Nasmyth, 15 1/2 by 11 1/2 inches in an oval, the property of the Mises Cathcart of Ayr, was sold for \$6,400. It is a replica of one that is in the National Gallery of Scotland. The artist made another replica, which is in the National Portrait Gallery, London.

Uncandid Beaconsfield.
Here is a story of Disraeli, the authority quoted for it being Sir Thomas Sanderson:
A famous diplomatist once went to see Lord Beaconsfield, conversed with him, and found him very agreeable. Soon after, the waiter who had shown him up came and asked him for a present.
"But why?"
"Don't you remember?" was the answer. "I showed you up to Lord Beaconsfield."
"What of that?" said the other.
"Oh, sir, after you had gone he did damn me uncommon for telling you he was at home."—From M. A. P.

Rail Road Men

In all departments of active service stand in need of the readiness of mind and promptness of action which depend on a healthy nervous system. Let a railroad man be "rattled," and every life depending on him is in danger. A great many railroad men have found in Dr. Pierce's Golden Medical Discovery a valuable tonic for the overstrained nervous system. It builds up the body, purifies the blood, nourishes the nerves, and induces a healthy appetite and refreshing sleep.

I suffered for six years with constipation and indigestion, during which time I employed several physicians, but they could not reach my case," writes Mr. O. Popplewell, of Eureka, Calif., "and I felt that there was no help for me; could not retain food on my stomach; had vertigo and would fall helpless to the floor. Two years ago I commenced taking Dr. Pierce's Golden Medical Discovery and little 'pellets' and improved from the start. After taking twelve bottles of the 'Discovery' I was able to do light work, and have been improving ever since."

Send 31 one-cent stamps to pay expense of mailing and get Dr. Pierce's Medical Adviser in paper covers, free. Address Dr. R. V. Pierce, Buffalo, N. Y.

The Last American King.
Maximilian and his followers were shut up in Queretaro. Many powerful influences were at work to save him. Seward also did his best. But he made little or no effort to escape. If he had failed as an emperor he could at least have faced disaster with the courage and the dignity of a right princely nature. Betrayed by the infamous Lopez, tried before a court martial of boys and ordered to be shot, he spent his last days in the discharge of all the obligations of friendship and courtesy. A false report of the death of Carlotta being brought to him in prison he said simply, "One less tie to bind me to the world." Led forth to his execution and told to stand between two of his generals who were likewise condemned, he surrendered the place of honor to General Miramon in recognition of his courage. The rattle of the muskets marked perhaps the end of all monarchy in the new world. But the bitterest critic of democracy could scarcely desire a gentler figure than Maximilian's to stand before the eyes of Americans as the last representative of aristocracy and of kingship on this continent.—William Garrott in Atlantic.

Just Meandering.
A city girl writes, "It is a fond dream of mine to become a farmer's wife and meander with him down life's pathway."

Ah, yes, that is a nice thing! But when your husband meanders off and leaves you without wood and you have to meander up and down the lane pulling splinters off the fence to cook dinner, and when you meander along in the wet grass in search of the cows till your shoes are the color of rawhide and your stockings soaked, and when you meander out across twenty acres of plowed ground with a club to drive the hogs out of the cornfield and tear your dress on the barbed wire fence, when you meander back home to the house, find that the billy goat has butted the stuff out of your child and find the old hen, with forty chickens, in the parlor, you'll put your hands on your hips and realize that meandering is not what it is cracked up to be.

Many an opportunity is wasted on the wrong man.

A NORWEGIAN'S WORK

ROALD AMUNDSEN, WHO LOCATED NORTH MAGNETIC POLE.

Declared to Be the Greatest Geographical Feat of the Present Century—First Gained Fame as First Officer of Belgian South Polar Expedition—Succeeded in Getting Through the Northwest Passage.

The world of science is taking great interest in the report that the Norwegian explorer Capt. Roald Amundsen has succeeded in his attempt to get through the northwest passage and locate accurately the north magnetic pole. A university professor declares the accomplishment the greatest geographical feat of the present century. Capt. Amundsen set out on his quest June 17, 1903, from Christiania, Norway, expecting to be gone about four years. He sailed in a small sloop of forty-six tons, the Gjoa, equipped with

CAPTAIN AMUNDSEN.

a petroleum engine for use in case of need, and with him were but seven others, Lieut. Gotfred Hansen of the Royal Danish Navy and six seamen. The whole cost of the expedition was only about \$27,000, which Amundsen paid chiefly out of his own pocket, so great was his interest in the problems he longed to solve for the world.

The north magnetic pole is to be distinguished from the geographical north pole. The latter is a point; the former is believed to be a considerable area at Boothia, the most northerly peninsula of the North American continent, about 1,200 miles from the geographical north pole. There are magnetic forces in the earth which cause the compass to assume a certain position at each place on the earth's surface. The north end of the needle points northward, but not exactly in the direction of the geographical pole. At some places it points east of the true north, at others west. If expeditions were to be imagined starting from various places on the surface of the earth and each moving forward always in the direction indicated by the north end of the compass needle, these expeditions would at last meet at Boothia, which is thus called the north magnetic pole of the earth. If the expeditions took the direction indicated by the south ends of the needle they would meet on the Antarctic continent, near the south pole, in Victoria Land. This is the south magnetic pole. These places are remarkable in that a so-called magnetic dipping needle will assume a vertical position at either of them, with the north end downward at the north magnetic pole and vice versa.

In 1881 the British Government sent an expedition to the northwest of the American continent, and one of its members, Sir James Ross, surveyed the region with the view of discovering the north point of magnetism. He found that in Boothia the dipping needle was deflected only one-sixtieth of a degree from a vertical position. His instruments were not so accurate as those since invented. He assumed the magnetic pole to be actually only a point. Since his time scientists have busied themselves with questioning whether the pole remains where it was fixed by Ross or is constantly changing. It was to make observations which would settle such points as these and also to make his way through the northwest passage that Amundsen set out. Before he left Neumayer, the great German magnetician, said to him, "Young man, if you are able to make an exact determination of the earth's magnetic north pole you will do a work of immense value to science."

Capt. Amundsen gained fame eight years ago, when he was first officer of the Belgian south polar expedition, and it was while blocked in the ice of the Antarctic that he conceived the desire to penetrate the northwest passage and accurately locate the north magnetic pole.

Fine Cut Facts.
New South Wales has about 7,000 aborigines.

The highest shot-tower in the world is at Villach, in Austria. The fall is 249 feet.

In India the average duration of life of the native is twenty-four years, as against forty-four in England.

The Caspian Sea has only 11 pounds of salt to the ton of water; the English Channel has 72 pounds and the Dead Sea 188 pounds.

Since 1801 the population of France has increased by only 44 per cent, and in the rest of Europe by 129 per cent.

The tobacco monopoly has yielded the Austrian Government the enormous net profit of \$5,000,000 for one year.

Wages are very low in Spain. Farm laborers about \$2 a week, the women who work in vineyards do not get more than 7 1/2 d. for ten hours' work.

Not Quite the Same.
Miss Angles—He was pleasant to say, I believe, that I had many good points. Miss Cutting—Not exactly, dear. He said you had a good many points.

They Quarrel.
She—You're just hateful. He—You're more so. She—You're a regular stick. He—You're as cross as two.

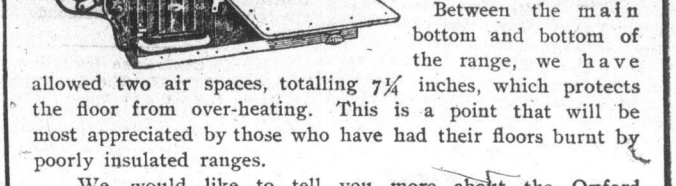

A Truth.
Here's reason and rhyme. To a proverb applied: A stitch, sirs, in time Is worth two in the side.

Blase.
"How the circus, Bobby?" "Oh, it's the same old thing as when you were a boy."

Ayer's Hair Vigor. A splendid dressing for the hair. Keeps the hair soft and smooth, and prevents splitting at the ends. Quickly checks falling hair and cures all dandruff.

Every detail about the Oxford Chancellor Range has been built with the object of strength and long service. Each part is constructed of the very best material and mounted by the most skilled workmen.

The ash-pit is deep and wide and fitted with a large pressed-steel ash pan. An outside ash guard is provided.

Oxford Chancellor Range
Between the main bottom and bottom of the range, we have allowed two air spaces, totalling 7 1/4 inches, which protects the floor from over-heating. This is a point that will be most appreciated by those who have had their floors burnt by poorly insulated ranges.

We would like to tell you more about the Oxford Chancellor Range. Won't you write for some of our free booklets?
