La Rose Still Leads in the Volume of Shipments-Temiskaming Is a Big Attraction.

> COBALT, Nov. 10 .- (From the Man on the Spot).-La Rose continues to lead the Cobalt shippers. This mine shipped two cars of high grade ore last week and will ship two more this week. Yesterday they shipped one thirty ton car of second grade ore and have got another thirty ton car of screenings from No. 10 tunnel ready for ship-

INTEREST IS INCREASING

ment.

Thirty-six tons of high grade ore are sacked and ready for shipment and two cars of screenings (second grade) will be ready to-night or to-morrow.

Five tons of 7000 oz. ore are sacked and ready for shipment at the entrance of No. 10 tunnel. The vein here shows increased width and value.

The McDonald vein now has a width of five inches and carries ore averaging between seven and eight thousand ounces of silver to the ton.

Argentite in very considerable quanti-

ounces of silver to the ton.

Argentite in very considerable quantities is now being found in this vein.

Never in Cobalt's history has there been greater interest displayed by the outside world in the camp, nor has there been as much local activity.

Special trains consisting of several Special trains consisting of several paches have been arriving during the

visited by all these tourists.

The development being done by the Coleman-Development (now to be known as the Pan-Silver), and the Gifknown as the Pan-Silver), and the Gifford may result in other new shipping mines from that section of the camp. The sensational width of 43 inches of solid ore on one of the big Temiskaming veins at a depth of 250 feet stamped this as one of the greatest of Cobalt's producers.

The sensational appearing ore at the Crown Reserve makes this another lode-stone of attraction.

SHIPMENTS IN THIRTY DAYS Capt. John Harris Pushing Operations on Victoria Property.

A letter from Capt. John Harris, (written Nov. 10), who is manager of the Victoria Mines, says: "I am pleased to inform you that the ore produced from the west and east vein at the end of shaft four is composed of nickelite, cobalt and silver.
"Furthermore the vein runs the

length of the property and promise to establish a reputation for the mine. I think we will be able to make a shipment within three or four weeks."

STAKES TEN CLAIMS.

Prospectors Are Busy in the Gowganda Lake District. The New Liskeard Speaker says: lessrs. Thos. Taylor, Thos. Magladery and Robt. Reid, who were prospecting in company, have come out of the Gowganda District and we are told that they have staked no less than ten claims in the midst of the mineral belt. They believe that some of their claims will just about put them on easy street. Reuben Armstrong has also returned, bringing with him about fifty pounds of silver samples which abundantly prove that the claim held by himself and associates contains the "pure goods." These young men have formed a company to be known as the

ed. They report that an offer or \$100 000 has been refused for their claim. An old man, evidently a tramp, was killed on the railway near Woodstock.

MOOSE HORN MINES

ONE OF THE GREATEST MINES OF THE NEW COBALT

The engineer in charge of the Moose Horn Mine, Montreal River District, is sending the most glowing reports to his principals.

It is reported that assays have been had on six distinct veins, running from 250 to 13,000 ounces of silver to the ton. The main shaft is down 68 feet, with a two-inch vein carrying high values.

Capt. John Harris, superintendent of the mine, in his report says: "At about twenty-five (25) feet down the shaft, the vein widens to one inch of Calcite, in some places SHOWING ALMOST SOLID SILVER. The vein holds good to the bottom of the shaft and the full length of the drift.

the drift.

"I have been in the Cobalt Camp almost from its beginning, and would say that there are as good showings of silver on the Moose Horn property as in any of the Cobalt Mines at their commencement, and for the same amount of work having been done.

"I BELIEVE THE MOOSE HORN MINE CAN BE MADE A PAY-ING PROPERTY FROM THE START."

WORLD OFFICE

We recommend the following stocks:

NOVA SCOTIA and ROCHESTER

COBALT PROPERTY

GIFFORD EXTENSION A PROPERTY WORTHY OF CONSIDERATION BY INVESTORS.

The location of the Gifford Extension makes it one of the best prospects in the Cobalt Camp to-day, and its low capitalization-only \$350,000 -marks it out as one of the most promising of the newer mines in the camp.

This property is right in the Temiskaming section, in which is located the famous Temiskaming Mine, one of the greatest silver mines in the world. It has already shipped over \$1,000,-000 worth of silver to the smelters, and paid out a quarter of a million in dividends.

The men connected with the Gifford Extension are well known in Cobalt circles. Their names are a guarantee of fair treatment to the shareholders.

It is safe to say that the Gifford Extension is one of the best non-shippers in the Cobalt Camp.
