TORQUAY, March 9.—An application to the Home Secretary for authority to remove the body of a woman from Paignton to Brookwood, near Woking, has revealed the fact that for some years there have been unusual incidents at a grave in Paignton. Until recently it was the practice of a friend to take elaborate meals into the vault containing the body and leave them there.

Recently the vault was sealed up, and an awning had been built over it. A funeral was set out there this morning, surrounded by choice flowers. Some of the meals have included joints of meats, wine and dainty cakes.

## Now a Way to Give Dull Teeth High Polish

Dental authorities urge this new way

Please accept full 10-day tube free. Note the coral firmness of your gums, the great difference in the color of your teeth as dingy film coat is cleared from them.

from food, smoking, etc. And that is why your teeth look "off color" and dingy—dull and unattractive. It clings to teeth, gets into crevices and stays. It lays your gums open to bacterial attack. Germs by the millions breed in it. And they with tartar, are a chief cause of pyorrhea and decay.

Old ways won't clear it off! Ordinary dentifrices and cleaning won't fight film successfully. Feel for it now with your tongue. Note how your present cleansing method is failing in its duty.

New new methods are being used. A dentifrice called Pepsodent—different in formula, action and effect from any other known. Largely on dental advice, the world has turned to this method.

DENTAL science now says, and thousands of people have learned, that teeth seldom are naturally off color and dull. Cloudy teeth now are restored to sparkling clearness. Tender gums firmed to healthy coral tint.

A new way has been found. One's whole appearance thus is often changed. Clear teeth make a tremendous difference in your smile. Foremost dentists urge this method. Scores of movies' \$100,000 a year smiles are made to glisten so alluringly in this simple way.

May we send you a full 10-day tube to try? Your teeth, you'll find, are not permanently off color—simply clouded with a dingy film coat ordinary dentifrices have failed to clear off successfully.

What film is—Dulls teeth, invites gum disorders. Dental science now traces scores of tooth and gum troubles to a germ-laden film that forms on teeth. Run your tongue across your teeth and you will feel it—a slippery, viscous coating. That film absorbs discolorations.

Clears film off Firms the Gums. It accomplishes two important things at once: Removes that film, then firms the gums. A few days' use will prove its power beyond all doubt. Send the coupon. Clip it now before you forget.
