

side of the river is nearly perpendicular, the west side more sloping. In former times a part of the rock at the Fall which is on the west side of the island, hung over in such a manner, that the water which fell perpendicularly from it, left a vacancy below, so that people could go under between the rock and the water; but the prominent part some years since broke off and fell down; so that there is now no possibility of going between the falling water and the rock, as the water now runs close to it all the way down.—The breadth of the Fall, as it runs into a semicircle, is reckon'd to be about 6 Arpents. The island is in the middle of the Fall, and from it to each side is almost the same breadth: the breadth of the island at its lower end is two thirds of an Arpent, or thereabouts.—Below the Fall in the holes of the rocks, are great plenty of Eels, which the *Indians* and *French* catch with their hands without other means; I sent down two *Indian* boys, who directly came up with about twenty fine ones.—Every day, when the Sun shines, you see here from 10 o'clock in the morning to 2 in the afternoon, below the Fall, and under you, when you stand at the side over the Fall, a glorious rainbow and sometimes two rainbows, one within the other.

I was
