

## **CANADIAN FLUOR-APATITE.**

---

The following brief compilation of statistics, showing the present status of the Canadian phosphate industry, is made for the purpose of bringing to the notice of capitalists the advantages offered by judicious investments therein. The importance of the subject, as well as professional matters, has induced us to make many careful examinations, extending over several of the districts in which the Apatite occurs, and as the results of our researches have, in a great measure, been borne out by the experience of others, we have taken the liberty of embodying in the following pages, extracts from their published statements.
