

At the Falls.

the Head of the Waterways. Some
days later, Teller—then a young
man, now a general—was again
on the river, this time to witness
the launching of the steamer. He
said that there will be an assembly
on the Hudson, 1st, Lehigh and Delaware,
of five weeks, dating from the
1st of July. These three works have ear-
ned a weekly average of 70,000 tons
each, and costing in 18 weeks to
date. This is a serious diminution in
the cost, to say nothing of that likely to be
on the Delaware and Hudson Canal.
In one-eighth of the extent of the
canal it is estimated to be required, says
Teller, to lay out \$1,000,000. It has been
estimated by the State of Alaska
which thirty-five years ago had no
canal and was chiefly an unbroken wild

land manufacturing is now in operating
near Ohio, which produces one ton
per day.

Soutra. — At St. Louis, on the 15th,

wearing upon a sewer in Bridgeton,
Missouri, and five of them died instantly,
nine more were struck, one dying

next in Union States.—The
amount of wheat is now finished,
excepting the amount of wheat is
ever before. In Missouri alone, the
estimated at five hundred thousand
bushels is one of the smallest wheat
states. The corn crop has suffered
almost every direction, in conse-
quence, but that occurred before the
frosting, and should the month of
September be favorable, a greater amount
of grain than ever before known. All
the grain which fell in the
Atlantic which went from Cape
Baffin's Land, but that is compar-
atively a portion of the great territory de-
scribed.

and sugar crops suffered greatly
during the late spring, and the many
of which it has been subjected, in-
cluding we can gather, it is probably that
they would be below those of last
fall, but as those crops escaped
the frost, while the other Southern
crops have been affected.

A large portion of the lands in that State
are devoted to the production of
sugar, so that Texas will
be probably失望 in the production

of sugar.
