

NOVA SCOTIA EXHIBIT PLEASED THOUSANDS AT THE TORONTO EXHIBITION

Wonderful Resources and Products of the Province Fascinated Great Thousands—Impressive Display by the Nova Scotia Government and Leading Manufacturers

(From The Toronto Globe) Calculated to give the visitor a more inclusive idea of the varied resources and extensive development of that "Province by the sea," a Nova Scotia exhibit, sponsored by the Nova Scotia Government and embracing booths presented by several of that Province's leading business firms, has been arranged in the Government Building at the Exhibition grounds.

Rich Natural Resources In wealth of natural resources Nova Scotia has been especially favored. Besides a mineral wealth at least equalling that of Northern Ontario, it is nearly surrounded by a sea that abounds in fish. In the number engaged in it, fishing ranks first among the Province's industries, 25,000 people being employed in this business. Cod, lobster, mackerel, haddock, halibut, herring, hake, salmon, sword fish, pollock and smelt are taken out of the Nova Scotia waters. The Province's lobster fisheries are the most valuable in the world and are the chief source of supply for Europe.

Fashion Fancies

By Marie Belmont

Materials such as heavy crepe and heavy satin are being used extensively in simple suits for the early Fall season. The model above is designed for wear before the cloth suits come into favor. The material is corded crepe in a rich brown, and the suit is very simply tailored. The coat has a brown suede belt that extends from slits under the pocket flaps, so it shows at the front only. There is a cream silk vestee for a touch of light color, and the side sections of the skirt are pleated.

Halifax, depicts the beauty spots of the Province well arranged, and a moving section apparatus giving a handsome view, including industrial plants, fishing villages and beauty spots, is continually in motion.

The whole exhibit, embracing a frontage of some 300 feet, displays enterprise and taste on the part of the exhibitors, and the Department of Natural Resources and Development, under the direction of the Hon. J. A. Walker, is to be congratulated on having one of the best collections exhibited at the Exhibition. A very large quantity of literature of a high class is being distributed at the several booths.

WINTERING BEES OUTDOORS

To winter bees successfully three things are necessary. (1) strong colonies of young bees, (2) an abundance of wholesome stores and (3) adequate protection. To neglect any one of these is to invite disaster. Weak colonies should be united in the fall. The winter supply of stores should be given not later than the first week in October. The time that protection is given will depend upon the method used.

Outdoor wintering is rapidly gaining in favor, and bees are now being wintered in packing cases where once it was thought they could not survive. Bees will be wintered in single, double or four-colony cases. The latter are more economical as less material is required for each hive. Whichever case is used it should be made large enough to allow four to six inches of insulating material between the hives and wall of case on the bottom and all four sides, and from six to eight inches on top, with at least one inch of air space between top packing and case cover. The colonies should stand close together in the cases with no packing between them. A tunnel must also be provided between the hive entrance and flight hole in the case. Colonies to be wintered outside should be placed in the cases during the latter end of September or early October and the bottom and side packing given. The hive covers should be removed to allow the hives to come together closely. As soon as the colonies are in the cases, give them all the food they will take down. The feeding should be done as rapidly as possible, and as soon as it is finished a quilt or bag spread over the hives and the top packing put on. These bees will require no further attention until next spring. Out-door wintered bees should be protected from prevailing winds by a good windbreak. For full information on the subject write to the Publications Branch, Department of Agriculture, or the Bee Division, Experimental Farm, Ottawa, for free Pamphlet No. 22 on "Wintering Bees in Canada."

C. B. Gooderham, Dominion Apiarist.

A FEW DON'TS FOR THE CAR OWNER

- DON'T leave your car covered with mud.
- DON'T wash your car with full force of water; better take the nozzle off the hose.
- DON'T leave your car standing in the hot sun longer than necessary.
- DON'T use polish unless you intend to use it.
- DON'T keep your car in too warm a garage in winter weather. When you take it out, it is likely to cause a cracking of the paint.

It is estimated that only 25% of the car owners take care of their cars. Let us all join in and make it as near 100% as possible.

Halifax, 31st August, 1925

Provincial Highway Board

The Provincial Highway Board has issued instructions to Motor Cycle and other Peace Officers which have been approved by the Governor-in-Council, as follows:

Motor Cycle and other Peace Officers are instructed that when a violation of the Motor Vehicle Act occurs, they, exercising sound discretion, will proceed as follows:

- (1) Either forthwith arrest the offender and bring him before a Magistrate to answer to the charge, or
- (2) They will allow the offender to go free and then lay an information against him before a Magistrate and have him issue a summons or warrant, or
- (3) They will inform the offender that he has the option of paying then and there ten dollars (\$10.00), which is to be forwarded by the Motor Cycle Officer to the Provincial Highway Board for its consideration as to whether or not it will be accepted, under Section 45, as full satisfaction, release and discharge of all penalties and imprisonments incurred by such offender for such violation.

However, when the violation consists in operating a motor vehicle without the prescribed number plates or permit, Motor Cycle and other Peace Officers are instructed to proceed as follows:

- (1) Either seize the motor vehicle and arrest the offender and bring him before a Magistrate, or
 - (2) Seize the motor vehicle and lay an information before a Magistrate, and have a summons or warrant issued, or
 - (3) Collect from the offender the fee payable for a permit for the car, give him a receipt therefor and, if the car has never been registered, have him fill in and sign a form of application for the registration of the car and transmit the fee and form of application to this office. In such cases instead of arresting the offender or laying an information, Officers may inform him that he has the option of paying then and there the minimum penalty of twenty-five dollars (\$25.00), prescribed for the offence which amount will be remitted to the Provincial Highway Board for its consideration as to whether or not it will be accepted, under Section 45, as full satisfaction, release and discharge of all penalties and imprisonments incurred by such offender for such violation.
- In cases of persons drunk or intoxicated while operating a motor vehicle, the car is to be seized, and the offender arrested and brought before a Magistrate and prosecuted under the Criminal Law.

One of the easiest ways to get acquainted with a nice girl is to marry her.

It is Nova Scotia's proud boast that no other Province in Canada nor any State in the United States equals this Province's annual per capita mineral production. Some years ago one-third of the total coal mined in Canada was Nova Scotian, and today only Alberta surpasses the Maritime Province in this regard. Coal is mined on the Island of Cape Breton and in the Counties of Colchester and Cumberland. The number of men employed on the surface underground in this industry reaching 14,000. The mines have in many instances spread under the sea, but estimates that there are still billions tons untouched.

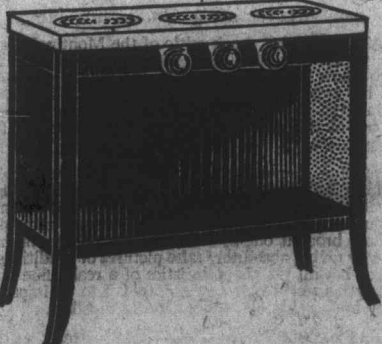

Immense Steel Mills Iron is found at various points in the Province, but the large steel mills draw heavily upon the Wabana Mines in Newfoundland, the closeness of the coal being their reason for locating in Nova Scotia. Gold is mined in almost every county in the Province. Antimony, lead, manganese and iron are among the other minerals. Sandstone and granite, fine specimens of which can be seen at the mines, are quarried throughout the Province, as well as grindstone and slate. Nova Scotia attaches great importance to its mineral resources, a quantity of which have not yet been developed. During 1924 the value of minerals and mineral products mined was \$44,084,000.

Good arable farm land abounds throughout the Province. Liberal assistance is given settlers by the Government, and improved land can be secured for as low as twenty-five dollars an acre. Irrigation has forged ahead in wonderful fashion during the past few years, and to fruit farming, the Annapolis Valley world-famous. Last year more than 10 million varrels of apples were grown here. Forestry, too, has a place among the Province's industries, 60 per cent. of this area carrying forest growth. Power has been taken from a large number of water courses, and plans are now on foot to harness the tides of the Bay of Fundy. Almost every part of the Province is wired, and with such power and natural resources close at hand Nova Scotia feels itself an attractive place for the investment of capital.

Fish Exhibits Increasing Visitors to the Government Building have displayed a great deal of interest in the three fish windows in connection with the Nova Scotia exhibit. More than 15 varieties of fish are shown by the Maritime Fish Corporation, and by means of a map, to which every species of fish exhibited is attached by a red
