**Bowels Almost Paralysed** "Fruit-a-tives" Relieved

St. Boniface de Shawinigan, P.Q. February 3rd, 1914.

"After suffering with terrible Constipation for over 2 years, 'Fruit-a-tives' relieved me. While a student at Berthier College, I became very ill and was forced to leave. Severe pains across the abdomen continually tortured me and my digestion became paralysed. Some one advised me to take 'Fruit-atives' and at once I felt a great improvement. After taking four or five boxes, I was completely relieved and have never had any return of this MAGLOIRE PAQUIN. 50c. abox, 6 for \$2.50, trial size 25c. At

Children Cry FOR FLETCHER'S CASTORIA

# Pearl of the Crossroads

How She Met Her Fate.

By FREDERICK BRIGGS Convright by Frank A. Munsey Co. •••••••••

Some one said that a sailorman was good for nothing but to chase about the world and send people presents. Pearl Smith had known this all her life, though perhaps she had never resolved it into just that expression.

She drew the line at having more than one man on the same ship. Still, this was not at all inconvenient, for there were sometimes no less than fourteen men-of-war, besides a score of merchant ships, in the crossroads of the Pacific at one time.

The girl came by the prosaic name of Smith because her father's name had been something else in some other country. He came to Honolulu before the cable was in good working order and remained. Marrying a half caste Kanaka girl, he had kept a sailors' boarding house on King's road since Pearl was a baby. The presents had been coming in since the little girl was big enough to climb on a sailorman's knee, and their volume increased with her size. She was grown up at four-

To see her then was like being wakened from a sweet sleep on a balmy afternoon by having great clusters of red, red roses pressed to one's cheeks. Young men dropping in at the Crossroads swore that they would never go to sea again, only to ship with the next tide for the Indian ocean in search of a pearl to match her skin.

She was like Honolulu days. The shimmering softness of her skin matched the warm afternoon skies. Rich reds of the island sunsets burned in her full, dimpled mouth. Tropic twilights lay behind her inky eyelashes, deepening to midnight in her long hair.

Men-of-war's men and merchant sailors sent different presents. The navy men leaned toward fancy jewelry and manicure sets, while the traders stuck to silk, uncut rubies, loose pearls, ivory fans and ostrich plumes.

This from the young men. To enumerate the junk that was dumped at the feet of this island goddess by silly old sea captains and others would be to copy the cargo bills of an East and West India tradesman. There would also be a list of small animals and birds, with a number of arctic treasures appended. Pearl kept what she fancied, and her father sold the rest. As for a girl accepting presents from

a dozen men at the same time, it must be remembered that Pearl lived neither east of Frisco nor west of Suez, which is only another way of saying that the girl was bred in a man's country, where anything a woman gets is so much for her gain and no less for her honor.

New admirers invariably meant more presents. But when a sailorman can jolly his superior officer and get anything he wants just for the asking women had better beware of him. When he stands six feet in his socks, laughs out of big blue eyes and conceals a cello note in a drawling voice so much the worse for the women. Heine-that was as far as they got with his name aboard ship, and it will suffice here— Heine was all of this and more. He was an American bluejacket, boat-swain's mate of the destroyer Shark.

There is one amusement the Ha-waiians have which Americans do not possess. We are enthusiastic surf bathers and are good swimmers, but a sight that is seen in Hawaiian waters is never seen on an American coast. A Hawaiian takes with him to the beach a board, usually about twice his length. This board he carries out as far as he can; then, placing himself on it, it bears him, forced by the waves, back again to the beach. Those who are not expert at this exercise may lie flat on the board, but those who are

trained to it stand erect, balancing their bodies as they roll toward the He met Pearl at Waikiki beach. She was shooting the surf when Heine saw her first. Standing upright with out-flung arms, she balanced on her polish-

ed board of kamani wood as it raced ahead of a giant breaker. Swift as the wave she flashed past the swimming sailor, but as the waters broke over his head he remembered every line of her beautiful body. The grace of her attitude struck him harder than the wave. Turning, he swam strongly toward the beach, where the spent roller had landed the fairy surf rider.

Half a dozen men were begging Pearl to be allowed to take her board out to the reef again, but she laughed them away with a flash of milk white teeth and struggled out alone. Heine met her a hundred fathoms from the beach, where the water came almost to his shoulders as he stood on the sand.

"I'll carry your board for you!" he cried as the girl broke through a wave almost upon him.

held the girl close to his heart. "My lip will swell!" she panted,

lied the commanding officer of the Shark, and within half an bour she had checked her surf board and bathing costume at the bathhouse and was riding back to town with him, holding

her handkerchief to the swelling lip. Three days later the fleet was ready to sail. Dusky singers with their tiny guitars strummed the sad "Aloha Oe" -"Farewell"-in every street. Pearl managed her other admirers so that Heine might have the last evening. When the time came for a final goodby Heine told her that he was coming back to Honolulu some day. Pearl studied his face; then she

pouted. "That's what they all say!"

was the word that came with the jewel.

Pearl's heart was filled with fear. Sailormen who sent presents never came back. Did she not have cream and rose pearls from the remittance man in Ceylon and a black diamond to rival her eyes? There was only one other man whom she had longed to see again—an English mate who sent her perfect pair of pigeon blood rubies rom Bombay. The jewels were torn from the eyes of a Hindu god, and the Hindus tore the mate's eyes from his head in revenge. But Pearl did not know this. She fastened Heine's gift on her bosom and put the other jewels

val service shortly after his visit to Hawali, and, without informing Pearl, he returned to Honolulu. He had served a jeweler's apprenticeship before entering the navy and soon found employment in a local store as an engraver. He purchased a little bungaow in Kalihi with the savings of his naval cruise and kept out of sight in Honolulu as much as possible, wishing to avoid meeting his sweetheart until

One day as he bent over his engravas Pearl's voice floated through the lat-tice partition. She was talking with the jeweler in the front of the store Peering through the slats, Heine saw

"Oh, of course. The sailors-they are so good to me," she laughed. "But what are they worth—pins, brooches, ings, watches and all?"

The ex-sailor sank back, stunned. A The ex-sanor sank back, stunned. A look crept into his face that his commanding officer had seen when his boatswain's mate reported "both anchors carried away, sir," as the disabled Shark wallowed with the wind to-ward the thundering rocks of Cape Flattery. Heine had trusted his anchors. Now he thought of his early training—of his sisters and the girls back in the Kansas home—his stand-

ards of honor for women.

The jeweler was speaking again.

nany diamonds," he replied. "Then I'll wait. More will come,"

The jeweler found his engraver sitpected the vitiating influence of the

had left the store the jeweler brought

To Heine-from Pearl." Pushing back his stool, he sprang to

his feet and faced the jeweler. "I've been judging that little Kanaka girl all this time from a wrong standpoint!" he shouted; then, hatless and coatless, he dashed from the building. "Heat's getting in its work," the jeweler mumbled to himself. "That's the trouble with these newcomers-can't stand the heat," and he shook his head

sadly, for the newcomer was an excel-lent engraver, and he let the gin alone. Heine overtook the girl in front of the Young hotel, and there, utterly ob-livious of the staring public, he caught her again in his arms, kissing her per fect mouth, no longer bruised, but soft as a red hibiscus blossom

BOOMERANG AEROPLANE.

Iwo Frenchmen Have Invented a Novel Flying Machine.

A flying machine that is neither aeroplane, balloon, helicopter, nor ornithopter is now being tried. It is called a gyropter, and is the in-vention of A. Papin and D. Rouilly. Its principle is taken from a study of the movements of a boomerang and of the fall and flight of the seeds of the sycamore. This last is a one bladed screw propeller turning about an imaginary axis and balanced by the weight of the seed grains so that

it falls slowly like a parachute.

The gyropter is made up of a long body, with a head and a tail, turning on an axis situated one-third of the distance from the head to the tail. The seat for the aviator at this centre of rotation remains immovable in the middle of the great boom-

The thing is not unlike a great banjo, the neck of which is turned at a right angle and ends in a hole. It is built of wood strengthened by interior braces, and covered inside and out with canvas.

It has neither front nor rear. It

is a body turning upon itself, a pro-peller-blade thrown into the air and given equilibrium by part of another blade placed there to balance the weight of the motor. This motor works a turbine which sends a stream of air at tremendous speed into the interior of the apparatus, whence it issues from the curved end of the tail and by its pressure on the surrounding air sets up a rotatory motion in the whole machine. The motor is in the head. It is a

rotatory motor, with nine cylinders, making 1,200 revolutions a minute. The air rushes through a wide tube surrounding the aviator's seat. The latter is in a circular box on ball-bearings. The air penetrates a sort of antenna made of wood and revolving about its longitudinal axis at the will of the pilot. This ends are according to the pilot. This ends in a curved pine through which the in a curved pipe through which the air rushes with force enough to prevent the car from partaking in the whirling motion of the rest of the machine. This antenna is the rudder of the apparatus.

Under the apparatus is a lens-shaped float, which acts as a cushion in descending and as a hub on which the machine revolves when started on the ground. The air rushes around the ma-

chine and is expelled from the end of the tail with a speed of 100 metres a second, about seven cubic inches being discharged every sec-ond. The surface of the apparatus is twelve square metres, and it weighs, pilot included, 500 kilograms. When the motor is tilted at an angle to the plane of revolution of

the whole, gyroscopic action makes the gyropter rise. There are two opposite gyroscopic motions, one of the motor, the other of the whole machine, and these insure stability under the guidance of the pilot, who can, of course, change at will the angle their planes make to each ather—Idnannesburg Sunday Times ather .- Johannesburg Sunday Times.
