

discover the larva of *occidentalis*; under the name of *Populi* Prof. Riley has given us a description and drawing of the larva of *lepusculina*; but perhaps more work with the best results has been performed by Mr. Roland Thaxter, who has proved himself a most conscientious student and kind personal friend to me. The present list supplements my former lists, the last of which is contained in "Papilio," and corrects certain inaccuracies which crept into them.

Genus APATELA Hübn.

Subgenus *Triaena* Hübn.

Type: A. Psi.

1. *Occidentalis* G. & R. "Western Dagger." Larva on apple and elm, (Saunders, Thaxter).
