CASES OF OVARIOTOMY.

BY EDWARD M. HODDER, M.D., C.M., F.R.C.S. ENGLAND; FELLOW OF THE OBSTETRICAL SOCIETY OF LONDON; PROFESSOR OF OBSTETRICS, TRINITY COLLEGE, TORONTO; HON. MEMBER, NEW BRUNSWICK MEDICAL SOCIETY; CONSULTING PHYSICIAN AND SURGEON, TORONTO GENERAL HOSPITAL, BURNSIDE LYING-IN HOSPITAL, &c., &c., &c.

(Continued from p. 110, No. 3, Vol. 4.)

Case 8. Mrs. W. set 32; fair complexion and healthy appearance, was married about three and a half years ago. She has two children; the oldest twenty-seven months old, the youngest thirteen months, both living and healthy.

In December, 1866, she first had an attack of pain in the left ovarian region, which was supposed to be of an inflammatory character, and treated accordingly. This pain lasted for three days in a severe form, gradually subsiding altogether in about a week. She has had several attacks since, but none so severe.

About twelve months ago, a Tumour about the size of a goose egg, was discovered low down in the left hypogastric region, painful only under heavy pressure, or when the attacks of pain
