28 Fri.	26	39	0 19	St. Peter's Day.	
29 Sat.	26	38	0 45		
30 A.	4 26	7 38	1 7	5th Sun after Trinity	will have one son.

SUGGESTIONS FOR JUNE.—Keep the soil mellow and free from weeds. It is said one weed will sow seed for a thousand. Let the horse cultivator frequently pass between the rows of growing crops. Let corn be sown in thick drills for fodder.

Let a thorough cleaning up occur in and around the farm buildings, having all swept out clean, the old hay, feed, and other old materials removed, and the whole premises put in good order for the reception of the new crops.

Cattle in the pastures should not be overlooked; and if any are found ailing, removed to the stables, nursed, and provided for.

Peas and oats may be sown together, about two bushels of each seed, well mixed, to the acre, and drilled in well; or drill in the peas three inches deep, and sow the oats broadcast, harrowing them in. The white field-bean may be planted in drills two feet apart.

Whenever a caterpillar's nest is discovered, do no other work until it is destroyed.
