THE CROPS IN ONTARIO

All Sections of the Province
Heard From.

For the Most Part the Prospects Are for

Good Hay, Wheat and Oats Crops—High

and Sandy Lands Are Showing Great

Promises for a Rich Harvest—Low Lands

Have Suffered from the Overplus of

Wetness—The Promise is for a an

Abundant Crop of Fruit in Most Lines.

The following are culled from a host of

crop reports furnished yesterday by Press

Superintendent James, of the Great North

Ottawa—The continued wet and cool

weather is becoming a very serious matter

in this section. The hay crop, an impor-

tant one here, is almost a total failure in

low lands, and is only a fair crop in the

high lands. The grain crops, until recently

better and indeed promised to be excep-

tionally heavy if warm weather followed,

but even they are now doubtful.

Port Stanley—Fall wheat and meadows

looking very good. Spring crops of all

kinds backward and not doing well. Apples

show so far, but too early to tell much

about them. The wet, cold weather is

retarding them.

London—Fall wheat and hay will yield

a very large crop in this section. All

spring crops are backward and, although

coming through the ground, are very

poor condition and much of the hay will

be of poor quality. Apples promise to be

a good average crop. Plums are plentiful.

Berlin—An abundant crop of hay is an-

ticipated. Fall wheat looks good and is

not too heavy, and a good yield is ex-

pected. Farmers are complaining of wet

rain, and not sufficient warm weather.

Calabrook—Fall wheat will average about

10 bushels per acre, and spring grain will

be an average crop. Hay also shows good

prospects. Wheat excellent, oats very

good, corn late, meadows are very good.

Peas, of which there is a large acreage,

owing to wet weather. Wheat looks well

and is likely to be a fair crop. There

will be an unusual quantity of apples, peaches

and cherries, and all small fruits are abun-

dant.

Unkleville—Fall wheat, fall wheat, fall

wheat, and spring grain are all showing

agood crop; oats, good average and good

prospects. Apples, prospects are for a

very good crop. Small fruits, raspberries,

strawberries and blackberries, heavy yield.

St. Catharines—The crops in this district

are generally looking well, though the

late frosts have injured the meadows and

strawberries were badly winter-killed. Other small

fruits look well.

Peterborough—Prospects are generally very

favorable. The grain planted on the low

lands is looking pretty well, but the high

lands are doing splendidly. The fall wheat

crop will not amount to anything as it was

crushed out by the heavy rain. The spring

crop is looking well and is a fair crop.

Windsor—In this section, the fall wheat

crop is looking well, and is a fair crop.

Spring wheat, very little sown on account

of too much rain. Farmers maintain that

the crops are looking well. Peas are looking

well. Apples are looking well. Small fruits

are looking well. The crops in this section

are generally looking well, though the

late frosts have injured the meadows and

strawberries were badly winter-killed. Other small

fruits look well.

Peterborough—Prospects are generally very

In three years; pears about two-thirds

crop; grapes backward. Early apples pro-

spects fair; late apples, greenings and sales

good. Strawberries will be light.

St. Catharines—The crops in this district

are generally looking well, though the

late frosts have injured the meadows and

strawberries were badly winter-killed. Other small

fruits look well.

Peterborough—Prospects are generally very

favorable. The grain planted on the low
