

Massachusetts Charitable Mechanics' Association, 1856.

Emerson's Patent Windlass works by slow or fast power by a capstan on the fore-castle. This machine can perform with four men the work usually requiring a dozen, and is a valuable element in safety of life and property, more especially in these days of "ordinary seamen." Your Committee deem it well to add ends to the Windlass, outside the bits as usual, to serve occasionally. To this valuable machine the Committee awarded a GOLD MEDAL.

R. B. FORBES,
JOHN S. SLEEPER,
BENJAMIN L. ALLEN,
JOHN H. GLIDDEN,
ELIAS E. DAVIDSON, } Committee.

Massachusetts Charitable Mechanics' Association, 1878.

NAME AND ADDRESS OF EXHIBITOR:

American Ship Windlass Company,
PROVIDENCE, R. I.

The above award was for "WINDLASSES AND ATTACHMENTS," and was the *only award* given for Windlasses or Capstans.

The AMERICAN SHIP WINDLASS COMPANY have taken the highest prize at every Fair or Exposition they have ever entered. These Windlasses have been manufactured in constantly increasing numbers since 1857, and of the large number in use for 30 many years, not one has failed to give satisfaction.
