The "Blackstone," an Electric Washing and Wringing Machine We Highly Recommend, is Priced at \$80.00

Reliable, Simple, and Convenient in Operation, Economical on Current Consumption and All-Round Efficiency

First of all, the Blackstone possesses the advantageous feature of being able to wring one batch of clothes while a second lot is being washed in the tub. The power of both wringer and washer is controlled by two levers, placed at one side of tub, and the gearing of this machine is so constructed as to allow opening of the cover while in operation.

The cut gears of the Blackstone practically eliminate friction and noise, because they fit snugly one within another, and the machine runs silently and smoothly. Fine laces and heavy blankets are alike to the Blackstone, for the safety dasher is made with small shield on under side; this to prevent any possibility of catching or tearing while clothes are being washed. The tub is of sturdy, rigid build, made throughout from red cypress, one of the most reliable woods procurable for the construction of tubs. The drain placed at bottom of tub, near the side, is particularly convenient for instead of having to tilt the tub to empty, the drawing of a plug is all that's

The wringer is a dependable one, and being equipped with a lever release that takes pressure off the rollers when not in use, the rubber is somewhat preserved. A motor is the enclosed type and with ordinary care should last for years. A good length of electric cord is provided, fitted with plug that fits the ordinary electric light socket. Judging the Blackstone from the standpoint of reliability, convenience, economy and all-round efficiency, it's really one of the best we know of. Price 80.00
