THE BEST OF ALL WAR MACHINES

This Cut is Turned Sideways Because in That Position It Looks Like Some Form of a Zeppelin---But---

No league of nations could evolve a machine of more universal good than this article, of which we give a detailed illustration. It's the Ohio vacuum cleaner.

The vacuum cleaner makes war not only on dust and dirt, but it is the great defensive weapon of the housewife and mothers of children, for it prevents the introduction of germs.

Machine, \$49

Attachments for Cleaning Cur-
tains, etc., \$12

The Ohio will clean upholstery, curtains, carpets, rugs, clothing, walls, radiators, cupboards and the nooks and corners that seldom are touched except at spring housecleaning time.

The Ohio Vacuum Cleaner is an up-to-date machine, equipped with a universal motor, adaptable either to direct or alternating current.

The motor-top and base are of aluminum, connected by black enameled brass supports to a strong handle shaped for comfortable usage.

**Switch-on Motor
Feature**

The switch is situated on the side of the motor; without bending, the motor is controlled by the handle, which switches the current on and off by lowering the handle to start and raising it to stop. The handle may be removed, the cord taken off and the remainder may be compactly put away either for moving or storing.

**Revolving, Detachable
Brush Feature of the
Ohio Vacuum
Cleaner**

A strong, substantial base of aluminum casting covers a revolving brush of heavy bristles which works on a belt system, and is detachable either for renewing or cleaning.

The aluminum castings have a satin finish, trimmed with a red band. Handle and fork are in a dull black and make a very serviceable and presentable machine.

**A Side View of the Ohio, Showing Oiling
Holes and Adjustable Castor.**

The Ohio Vacuum Cleaner has but two necessary oiling operations—one directly at the top of the motor and the other at the bottom. The oil is absorbed by two large felt pads which will prevent over-oiling, splashing and dropping of oil on the carpets.

The wheel in the bottom of the illustration enables the nozzle to be lowered or raised, according to the nap or surface of the carpet.
