What It Takes To Feed New York For a Day

(Literary Digest)

A writer in the New York Times Analyst, believing the daily bill of food consumption in New York city is "worthy of close study in this time of world-rations," has presented a series of interesting facts on the subject. It appears that in a single day 5,602,841 residents of the city consume 5,744,478 pounds of meat, 648,780 pounds of poultry, 3,371,029 quarts of milk, ice cream, tomatoes, peaches and strawberries, 648,780 pounds of fruit and eggs, nineteen carloads of other fruits, and 4,111,472 leaves of bread. "What suffices New York for only a day might feed London or Paris for two days," he says. "It probably would serve Berlin for a week."

The writer says further:

"The amazing demands of New York's appetite are supplied from all parts of the United States and from many foreign countries as well. Rarely has it on hand a supply to last more than a week, and not infrequently it is forced to make emergency calls for food supplies to its neighbors, Boston and Philadelphia. Left to its own devices, New York city would begin to starve after a week."

"But, if New York demands only the best and plenty of this, requiring of every section of the country the choicest products of the soil, it is always ready and able to pay for what it gets, and it does not haggle over the price. Its daily food-bill, as calculated in a recent issue of The Analyst, is \$2,570,079, and this does not include its expenditures for confections, tobacco and alcoholic drinks."

"The figures quoted in the accompanying table are taken from the current reports of private and governmental experts on markets and crops, and they represent New York's food-consumption at the present moment, when the cost of living is increasing daily, and is already 100 per cent, or more higher than it was five years ago, and when the city might be expected to hold its appetite in leash if it ever is to do so."

Daily the city consumes 1,600 head of cattle, 1,600 calves, 2,147 sheep, 1,893 lambs, and 795 swine, a total of 8,168 head. Farmers have found that cattle will graze over three acres each and keep them close-cropped; ultimately they would starve on them if pastured unfenced their only food-supply. So 24,469 of New York's 210,400 acres would have to be devoted exclusively to pasturage, an area equivalent to practically all of Manhattan Island. But still other acres would have to be given over to the growing of hay and grain to augment this fodder, so most of Brooklyn would have to be so utilized, leaving only Queens and the Bronx, with Staten Island, to furnish the other crops which New York consumes in gargantuan quantities. Somewhere in the city there would have to be planted a crop that would yield 1,887,740 pounds of potatoes a day, 104,850 pounds of onions, 62,250 pounds of beans, 9,850 pounds of peas, and 141,184 quarts of tomatoes.

"But all these supplies would last

only for a single day. To provide the quantities which New York consumes throughout the fresh-vegetable season would require many more acres than the entire expanse of all the boroughs; so, were the city to plant all its land, the regular importation of food would still be necessary. Now the average freight has a capacity of 60,000 pounds, or a little more, so each day a train of nearly forty cars, each laden to capacity, must enter New York to supply these vegetables alone. Another train of more than sixty cars brings in no more than the necessary quantity of dairy products, and still a third of similar capacity handles no more than the supply of fruit which the city has to have on its table each day.

"But, in addition to all these car loads, New York must import its meat supply, since grading is poor in city streets. Some arrive 'on the hoof,' and some as dressed beef, mutton, pork, and lamb; and in either form tremendously increases the number of freight cars, the services of which are required daily. Nearly 2,000,000 pounds of meat alone—1,889,688 pounds, to be exact—is the city's daily ration. And yet the average per capita consumption of food products, and still a third of similar capacity handles no more than the supply of fruit which the city has to have on its table each day.

"The average New Yorker's menu comprises about a third of a pound of meat and a similar quantity of vegetables, a tenth of a pound of butter and cheese, a pint of milk, an egg, and a loaf of bread. It is the well-to-do citizen of whom the 'average' resident or parts thinks when he refers to the 'average' New Yorker and it is he who keeps New York's food-consumption high, despite the rising cost of living."

"For very little of New York's food supply originates within the city, and to the initial cost of imported products is added the cost of carriage. Strangely enough, the city produces a large quantity of a product which few New Yorkers even realize is manufactured at all in their city. This is flour. Probably every one thinks of his flour, if he thinks of it at all, as coming overland from Minneapolis and, consequently, he blames the transportation rates, together with the rising price of wheat, for its increasing cost."

"But flour is milled in the very heart of down-town New York, and as many as 1,614 barrels are produced each working day. Large as these figures sound, however, this flour forms only a small part of the quantity consumed daily in the city's baking, and is nowhere near sufficient to affect the price, especially as the wheat from which it is milled carries itself an increased cost for transportation into the city."

The writer appends to his article a tabular statement of "what New York city eats each day," as follows:

Meats

Beef, 1,600 carcasses or, pounds 880,000
Calves, 1,688 carcasses or, pounds 168,828
Sheep, 2,147 carcasses or, pounds 189,571
Lambs, 1,893 carcasses or, pounds 67,672
Swine, 795 carcasses or, pounds 119,650
Dressed poultry, pounds 187,700
Live poultry 178,600
Bacon, pounds 173,942
Hams, pounds 24,678

DESPONDENT WOMEN

Constantly recurring suffering gives women "the blues." Comparatively few women realize that dependency, together with headache, and other "dragging-down" feeling indicate some derangement of the feminine organs, for which Lydia E. Pinkham's Vegetable Compound is a remedy.

It is said that this famous, old root and herb remedy has been the means of restoring more women to health and consequent happiness than any other remedy in the world.

Don't wait until your life is wrecked by neglect and suffering. Give the Compound a trial.

PAPER TORCHES

Newspapers make the torches by the light of which surgical operations are performed. It is the same with the torches of the French trenches and they make the best sort of trench candles, because they do not drip wax and they give a full, soft light, equivalent to that of several tallow candles, and one page of a newspaper will burn for two hours if the candle is properly made.

The New York Red Cross is sending the torches to France as fast as they can be made. Already 5,000 have been placed in the French trenches since a recent meeting of candle-makers assembled in Bretton Hall Hotel, New York, and taught representatives from 21 states how to make the candles properly. These representatives are teaching newspaper torch-makers the average resident with about a pound of meat and vegetables, a pint of milk, less than a whole loaf of bread, and a moderate supply of fruit.

"The average New Yorker's menu comprises about a third of a pound of meat and a similar quantity of vegetables, a tenth of a pound of butter and cheese, a pint of milk, an egg, and a loaf of bread. It is the well-to-do citizen of whom the 'average' resident or parts thinks when he refers to the 'average' New Yorker and it is he who keeps New York's food-consumption high, despite the rising cost of living."

"For very little of New York's food supply originates within the city, and to the initial cost of imported products is added the cost of carriage. Strangely enough, the city produces a large quantity of a product which few New Yorkers even realize is manufactured at all in their city. This is flour. USE THE WANT AD. WAY

LOCAL NEWS

The Temple Band gave a band concert last evening on King square. Owing to the threatening weather the crowd was not a great as usual.

The Duck Cove fair, which was to have been held last night by the Duck Cove Circle of the Red Cross, was definitely called off, due to the threatening outlook of the weather.

TO CARE FOR FAMILIES OF NEGRO SOLDIERS

Through the personal efforts of Mrs. Emilie Bigelow Haggood, an organization has been perfected to care for the wives and children of the Negro soldiers now preparing to go to the front with our forces, to enter the war. This organization is known as The Emergency Circle for the War Relief of the Negro Soldiers, and among its members are Mrs. Charles S. Whitman of New York, Gov. Frank S. Wilson of Illinois, Mrs. M. D. Drue Wilson, Mrs. Amos Pinchot, Rev. Percy Stickney Grant, John Barrymore and others equally prominent.

The undertaking has received strong endorsement from Col. Theodore Roosevelt. In a recent letter to Mrs. Haggood, he said:

"I most cordially sympathize with the purpose of the Emergency Circle for the Negro War Relief, and wish you and your associates every success in your efforts to meet the needs of the Negro soldiers and to give aid to their families. This is an important patriotic duty, and as an American I thank you for performing it."

In an interview, explaining the contemplated work, Mrs. Haggood said: "It is perhaps not generally realized that one-tenth of the people of our country are Negroes and fully one million of this race are of military age. In every previous war, the Negro has enlisted willingly and has shown great bravery under fire. In the Revolutionary War 6,000 of them fought under General Washington and Negro units were raised in Connecticut, Rhode Island and elsewhere. During the War of 1812, there were Negroes who helped General Jackson win the Battle of New Orleans. Many colored men fought in New York State and in the navy, under Perry and Chandler. In the Civil War, 300,000 Negroes enlisted. They fought in 213 battles and Abraham Lincoln said that they could not have been won without them. In the Spanish-American War, the four colored regiments of United States regulars were immediately sent to the front and in the Philippine conflict was a brilliant one. Volunteer units also were raised in five states, and many of them with Negro officers."

"Today, colored men are volunteering in considerable numbers and there is no organization to take care of their families or personal needs. This work we hope to assume and we are asking the support of other interested persons to help us in the work. We have had many encouraging letters that show the eagerness of our people to meet this need. It is a need that might possibly have been overlooked and we are appealing to generous and patriotic Americans to aid us by contributions in making the work really helpful and effective."

The treasurer is Harrison Rhodes, 222 West Catherine street, New York City; Mrs. Emilie Bigelow Haggood is of 12 West 12th street, New York. The depository is the Farmers Loan & Trust Co., New York.

TSETTING AIRMAN'S SENSE OF BALANCE

A triple exposure reproduced in the September Popular Mechanics Magazine, shows the adjustable chair in which the man is seated, is mounted on a swivel and can be whirled about. One of the tests is to revolve the apparatus at high speed, ten times in each direction, with the eyes closed. On stopping him suddenly he is asked to open his eyes and look in a certain direction. The first movements of the optics at such a time reveal to the examiner something of the man's ability to find his balance. On being stopped suddenly after a similar whirling, with the head bent forward in turn was due nine times out of ten to excessive acidity, commonly termed sour stomach or heartburn, which not only irritated and inflamed the delicate lining of the stomach, but also set up gastritis and stomach ulcers. It is interesting to note that he condemns the use of patent medicines as well as of medical treatment for the stomach, stating that he and his colleagues have secured remarkable results by the use of ordinary bisulphated magnesia, which, by neutralizing the acidity of the food, removes the source of the trouble. He contends that it is foolish to treat the stomach itself as it would be for a man who stepped on a tack to rub liniment on the foot without first removing the tack. Remove the tack and the foot will heal itself—neutralize the acid and the stomach troubles will disappear. The dieting medicines and medical treatments are useless, so long as the contents of the stomach are acid. The remedy is acidity, and there will be no need for medicine—the inflamed lining of the stomach will heal itself. Sufferers from acidity, sour stomach or heartburn should get a small bottle of bisulphated magnesia from their druggist, and take a teaspoonful in a quarter of a glass of hot or cold water after meals, repeating in fifteen minutes, if necessary, this being the dose which the doctor has found most efficacious in all cases.

Is There Scheme Behind This?

Country Will Want to be Convinced That Rogers Resignation is Not Carefully Staged Event

Toronto, Aug. 20.—The Globe, on Tuesday, will say editorially of Rogers' resignation:

"It will take positive assurances to convince the country that the cabinet resignation has not been carefully staged by the prime minister and Mr. Rogers in collusion. The suspicion may do an injustice to Sir Robert Borden, but he can dispense it by providing that Mr. Rogers will not be an agent of the government during its election work, with the promise of high office in his pocket so he can reap the success of 1917."

"There are obvious reasons why it would be expedient to disown Mr. Rogers during an election campaign. His name is not an asset."

"Sir Robert Borden must show that the separation is not a temporary make-believe, and that the reported disagreement is not a sham fight arranged so as to give the leader of the government the credit of having plucked up a degree of courage. The events of the next few days may demonstrate whether the present resignation deserves credit or not. If Sir Robert is responsible for the dismissal of his colleague, he has removed an obstacle to the formation of a truly national government. In any event high-minded Canadians are glad that Mr. Rogers is out of the ministry."

WASTE OF FOOD STUFFS

Odds and Ends Thrown Away Amount to Vast Amount

Do not waste a slice of bread, says Conservation. There is an old saying: "Many micks mak' a muckle," and, if there are many individual savings the total gain will be great. Do not be too proud to notice whether anything usable is being wasted; do not be too proud to use odds and ends which might

otherwise be cast into the garbage can. In Chicago, recently, the garbage was reduced from 400 loads a day to 200 loads a day due largely to the preservation of economy. Economy in the use of food stuffs should be practised by those who live in the West as well as those who dwell in the towns and cities. Get the real vision of economy and put it into daily practice. Every individual must realize what want and famine would mean and then must put forth every effort to prevent it. Do not leave it to the other fellow to do your part. In this matter prevention is a thousand times better than cure. Eliminate all waste in your household.

ACID STOMACHS ARE DANGEROUS

Nine-Tenths of All Stomach Trouble Said to Be Due to Acidity

A physician's advice on Cause and Cure of Stomach and Intestinal Diseases have earned for him an international reputation, said in the course of a recent lecture that nearly all intestinal troubles, as well as many diseases of the vital organs, were directly traceable to a deranged condition of the stomach which in turn was due nine times out of ten to excessive acidity, commonly termed sour stomach or heartburn, which not only irritated and inflamed the delicate lining of the stomach, but also set up gastritis and stomach ulcers. It is interesting to note that he condemns the use of patent medicines as well as of medical treatment for the stomach, stating that he and his colleagues have secured remarkable results by the use of ordinary bisulphated magnesia, which, by neutralizing the acidity of the food, removes the source of the trouble. He contends that it is foolish to treat the stomach itself as it would be for a man who stepped on a tack to rub liniment on the foot without first removing the tack. Remove the tack and the foot will heal itself—neutralize the acid and the stomach troubles will disappear. The dieting medicines and medical treatments are useless, so long as the contents of the stomach are acid. The remedy is acidity, and there will be no need for medicine—the inflamed lining of the stomach will heal itself. Sufferers from acidity, sour stomach or heartburn should get a small bottle of bisulphated magnesia from their druggist, and take a teaspoonful in a quarter of a glass of hot or cold water after meals, repeating in fifteen minutes, if necessary, this being the dose which the doctor has found most efficacious in all cases.
