

THEO DORA SOCIETY.

The fourth regular meeting was held on Thursday, Nov. 22nd. The programme for the day consisted of two essays, one on "East Central Africa," written by Miss Botterell, and one on "The Mohammedanism and Paganism of Africa," written by Miss Moffat.

Dec. 4th.—Africa still holds the attention of the Society. An essay upon "Western Africa" was read by Miss Kennedy, followed by one from Miss McCoy on the "African Slave Trade." The interest felt in the latter subject was strong, and elicited some discussion.

The needlework done in the Society is progressing fairly, judging by appearances, and there is some talk of sending off all completed work on hand at Christmas.

THE MUIOTA SOCIETY.

Dec. 2nd.—All the resident members, six in number, were present at the third monthly meeting of the Lady Graduates' Society. The general subject was—"Canadian Politics." Two papers were read, one from Miss A. Wilson, Winnipeg, on "Provincial Parliaments;" and one by Miss McFee on "The British North American Act of 1867." Miss McFee gave a logical account of the steps which led to the Act, the Act itself and its results, and varied her essay with extracts from Bourinot's "Constitutional History of Canada."

In the discussion which followed, Miss Hunter told some personal experiences of the Parliament of Prince Edward Island.

Personals.

THE GAZETTE would like to have the address of A. G. G.

Corbin, Med. '90, has been selected as representative to Kingston.

Andrew Young, '88, Applied Science, is now in Helena, Montana.

D. J. Fraser, Arts, '90, has been appointed Valedictorian for his class.

P. L. Foster, '82, App.Sc., is making a reputation as a Mining Engineer in Montana.

Dr. C. W. Wilson, '86, of Buckingham, Ontario, is in town for a few days, on his way to Europe.

T. H. MacKinnon, M. D., '89, is located at Mill Village, N. S., and is reported to be thriving.

We deeply sympathize with Hamilton, Med., '91, whose brother was drowned at Sackville, N. B.

R. S. Lea, Science, '90, has been selected by the graduating class to read the Valedictory address.

M. J. McLeod, B. A., (ager), every Arts man will be sorry to learn, has gone over to the great majority.

W. J. Hamilton, '87, App.Sc., has been speculating in mines, ranches, and town lots. Billy "will get there or bust."

W. H. Graham, '84, App.Sc., spent the summer in Europe, principally in Great Britain, studying the great engineering works.

Hubert, M. D., '89, is practising the science and art of Medicine in St. John's, Newfoundland, and his efforts are meeting with a ready acceptance.

MacPhail has gone to Halifax and Prince Edward Island to procure illustrations for a forthcoming Magazine article, dealing with some phases of Maritime life.

J. Craven, of the Class of '87, App. Science, has been studying Electrical Engineering, and has been representing the Edison Co. in the Far West and South.

It makes the boy's hearts glad to see Harry Bell, M.D., '88, come occasionally into the hospital. It is an earnest to them of what they may yet attain to, in the way of professional dignity.

All the students of Class '91, Medicine, were glad to see J. N. Kyle around College again last Saturday. He intends going on with his course, which he was forced to give up in his first session.

J. E. LeRossignol, B.A., '88, writes from 19, Lohnstrasse (with two dots over the "o") Leipzig, and it will give his friends much pleasure to hear of his welfare. He also states, parenthetically, that even for a German student it is not necessary to become addicted to the alcohol and nicotine habits.

McNutt, App.Sc., '87, has been heard from in Aspen Co., and we may be permitted to shake (hands) with him in January. He is evidently learning Spanish, for if some parts of his letter are not Spanish, well——. He has found some congenial companions, graduates of McGill, Yale, and Ann Arbor. Quarters have been secured in a "new brick block." We hope it is red brick, otherwise it will soon change color. He is having a varied and practical experience in all departments of a sampling works. For the benefit of the uninitiated, we would explain that a "sampling works" is a place where ores are treated in large quantities.

In the *Denver Times* we notice a picture of John Hislop, '84, App.Sc. No one would suspect it was he. It is in connection with the second surveying expedition of the Denver, Colorado, Canon, and Pacific Railway Co. The first expedition, of which Hislop was transitman, left Denver on May 22nd to survey the Colorado River. The first mishap was the loss of a boat loaded with provisions. Then, on July 10th, President Brown's boat was capsized, and he was drowned. Later on two more of the party were drowned.

"The remainder of the party continued down the stream, sadder than ever, for a distance of 20 miles or so, to a point where a side canon put in, which they went up with great difficulty, and taking a mountain sheep trail, were led up and out to a level
