ing-grounds, according to season, is something entirely different from this, being a removal of the fleet to other banks far distant. It is a fact worthy of every emphasis that no such extensive movement on the part of the fish is to be found, whether there is some possibility of a limited and local movement or not.

"It would seem certain that the closure would not protect spawning fish especially, and there would be little utility in extending protection to halibut spawning and immature alike at the cost of more intensive fishing during other seasons. As has been indicated, the depleted banks are characterized by a lack of mature fish and a predominance of immature. If the latter are caught, it is a matter of indifference at which season it is done, as all succeeding spawning periods are eliminated, anyway. This is also true of the mature halibut. There is no reason why capture a week before spawning-time should be more disastrous than
