

General

4. Each Party shall designate its management entity responsible for the harvest of salmon referred to in paragraph 3.
5. The Parties shall seek to ensure effective conservation and management of stocks originating in the Yukon River.
6. When a fishery is managed under a guideline harvest range regime:
 - (a) the United States shall manage its fishery with a view to delivering to the Alaska-Yukon border the agreed spawning objective plus the midpoint of the Canadian guideline harvest range; and
 - (b) Canada shall manage its fishery within its guideline harvest range with a view to achieving the agreed spawning escapement objective. In years when the number of salmon reaching the Yukon River mainstream border exceeds the upper end of the Canadian guideline harvest range plus the upper end of the agreed spawning escapement objective, Canada may, subject to paragraph 18, utilise the surplus.
