

departments with sound and useful knowledge, but also exercising at all times a parental watchfulness over the morals of those entrusted to their charge. It has been very gratifying to the Governors to find, from the regular reports made to them at stated periods by the President, and which will be found as usual in the appendix, that the general conduct of the undergraduates, as well as their application to study, has been found satisfactory.

During the year an unexpected change has been made in the staff of Professors, in consequence of the resignation of his Professorship by the Rev. Geo. W. Hill, on his acceptance of the Curacy of St. Paul's, at Halifax. Hereupon the Rev Professor Hensley was appointed to the Chair of Pastoral Theology. The Governors parted from Mr. Hill with feelings of much regret, and thus recorded their sentiments in the minutes of the Board :—

Resolved, unanimously, That the Governors of King's College desire to record their entire approbation of the ability, zeal and assiduity, with which Professor Hill has discharged the high and important duties of his Professorship, during the four years of his incumbency, and to assure him that they have accepted his resignation of that office with great regret, considering, as they do, that his removal is a serious loss to the University."

Advertisements were immediately published, inviting applications for the Professorship of Mathematics, &c., and at the same time a correspondence was opened with Professor Anderson, of the Glasgow University, to whom we are already so much indebted, for sending us the present able Professor of Chemistry and Natural History.

This correspondence has resulted in the appointment of Joseph D. Everett, Esq., M. A., of the University of Glasgow, and late Secretary to the Meteorological Society of Scotland, to be the Professor of Mathematics, Natural History and Astronomy, in King's College, Windsor. This gentleman has forwarded to the Governors a large number of testimonials of the most satisfactory nature, from some of the most eminent men of science in the Mother Country. He is expected to be at his post on the opening of the Michaelmas term.

The correspondence with the Smithsonian Institute has been regularly maintained, with much satisfaction and advantage, and meteorological observations are regularly exchanged.

Another valuable volume of the transactions of the Institute has been kindly forwarded to the Library during the year.

Professor How has been prosecuting his scientific researches with success, adding to his own reputation and that of the College, as well
