

says "Spruce, hemlock, fern, berry bushes, small cedar - heavily timbered soil mossy". Are you not?

A. Yes.

Q. What proportion of this reserve, if any, could be used for garden or agricultural purposes?

A. I don't think any except the ~~lake~~ flooded land which might be used if dyked.

Q. The field notes confirm your previous statement that the southern portion has been overflowed grass land?

A. Yes.

Q. What do you say as to No. 5, Lagins, a reserve of 40 acres on the left bank of the Lagins River, at the head of Long Arm Skidegate Inlet?

A. There is a little grass land on the North East corner,

Q. How many acres?

A. That it does not say (Referring to field note).

Q. What portion of it would be grass land, do you think?

A. Only a very small portion. About six acres roughly.

Q. What is the balance of that reserve?

A. The balance seems to be all moss, with some spruce and hemlock. Berry bushes, soil mossy and a few cedars and fallen logs.

Q. Would anything outside of the 6 acres you mention, be suitable for farming or gardening?

A. No.

Q. Would those six acres require dyking?

A. I should not think so.

Q. There is a small stream in that reserve?

A. Yes, which comes in at the post.

Q. Do you know of your own knowledge, whether they use it as a fishing station?

A. I don't know, but in all probability they fish there. It is a stream larger than a brook (about a chain wide).

Q. How about No. 6 - Kaste - 33 acres in Copper Bay, what about that?
