

summer resident throughout the Province wherever there are trees or even small bushes. Arrives May 20; departs August 30.

143. **Arkansas Kingbird.** *Tyrannus verticalis*. Two specimens of this, an adult and one in first plumage, were taken by D. Losh Thorpe at the Souris coal fields, August 20, 1891. This is not many miles to the west of the Province, and justifies the insertion of the species as *probably* Manitoban.
144. **Crested Flycatcher.** *Myiarchus crinitus*. Summer resident about Winnipeg; noted several times at Carberry. Taken by Professor Macoun at Lake Manitoba, June 17, 1881. Quite common along the Assiniboine. On Aug. 20, 1904, I got one at Lake Winnipegosis. This is the northernmost that I know of.
145. **Phoebe.** *Sayornis phoebe*. Rare summer resident, but apparently found in all parts of the Province; recorded even from Norway House.
146. **Olive-sided Flycatcher.** *Nuttallornis borealis*. A common summer resident in all the wooded parts of the Province.
147. **Wood Pewee.** *Myiochanes virens*. Summer resident of the heavy woods in the Alleghanian region.
148. **Western Wood Pewee.** *Myiochanes richardsoni*. Common summer resident of the willow thicket and open groves throughout the Alleghanian region.
149. **Yellow-bellied Flycatcher.** *Empidonax flaviventris*. Summer resident, frequenting woodlands. Noted at Winnipeg, Portage la Prairie, Duck Mountain, and Oak Lake. Probably throughout the Alleghanian region.
150. **Alder Flycatcher.** *Empidonax traillii alnorum*. Recorded from Pembina, Carberry, Lake Manitoba,
