

Double Separation *beats* Single Separation *as a* PROFIT EARNER

The Reeves Compound Separator
With Mammoth Cylinder.

In this REEVES "Compound" Separator

the upper separating device, itself the most effective ever invented, is re-enforced by a second separating table which in turn is as effective as the whole separating mechanism of most machines.

Remember that point

when buying a threshing outfit. If there is any one thing more than another that will drive away a customer it is to see what he knows to be too large a proportion of his grain going into the straw.

❖ You cannot fool a farmer. Most of them have seen a REEVES "Compound" Separator in operation and they know what "real" separation is. REEVES Double Separation tickles the farmer every time and brings you business. Lack of it is liable to cost you many good accounts.

❖ A thresherman is known by the work he delivers. Thresh with a REEVES Compound Separator and you will have the satisfaction of knowing that you have nothing to fear from your competitors on this point.

Another Pointer

Don't buy a SINGLE CYLINDER engine without reading the comparison between them and this REEVES DOUBLE CYLINDER ENGINE in the REEVES Engine Catalogue.

After that you won't want one.
